

Some 8,000 feet above sea level a peregrine falcon cruises from its perch atop the high plateau of Zion National Park. A flock of band-tailed pigeons note its approach and bolt on noisy wings into a stand of ponderosa pines. The falcon careens over the edge of its looming sandstone world and drops roughly 2,000 feet along a sheer rock wall; white-throated swifts scatter to give it space. At the base of the cliffs the raptor's flight becomes more horizontal. From the pygmy forest of pinyon and juniper, pinyon jays squawk their disapproval, and further down, along the Virgin River, a black-headed grosbeak eyes the peregrine from the cover of a big cottonwood. Soon, the falcon's shadow is streaking across searing desert terrain, where a roadrunner abandons its pursuit of lizards to avoid becoming prey itself.

Amazingly, a peregrine falcon can be within a talon's grasp of each of Zion's major habitats during its short flight.

In Zion National Park, a diversity of environments is compressed into a relatively small space. While birdwatchers lack the peregrine falcon's speed of 100 mile per hour, you can still visit Zion's different habitats within a day.

Experience the varied landscapes of Zion to enjoy their stunning beauty and with the many bird species that occupy them.

This checklist contains 295 bird species.

Habitats

- D Desert sagebrush and blackbrush areas, including grassy canyon bottomlands like Huber Wash, Coalpits Wash, parts of Chinle Trail, and fields around Springdale.
- R Riparian woodlands along the Virgin River and its tributaries.
- P Pinyon-juniper woodlands, including the sloping sides of Zion Canyon, possibly with interspersed scrub oak thickets.
- E Evergreen woodlands—including fir, ponderosa pine, aspen, and associated vegetation—plus mountain meadows, side canyons, and canyon walls; such as the upper parts of the West Rim Trail, Potato Hollow, Hidden Canyon, and much of the Kolob Canyons area.
- W On or near water areas, including the Virgin River and tributaries, Kolob and Blue Springs Reservoirs, and Springdale Ponds.
- A Birds may be seen in almost any habitat type.

Abundance

- c Common, seen most days in correct season and habitat.
- u Uncommon, seen in low numbers in correct season and habitat
- r Rare, no more than a few sightings per year.
- s Sporadic, may be numerous in some years and entirely absent in other years.
- x Accidental, seen no more than a few times or reported but not well documented.
- Species not known to occur in this season or data not available.
- * breeds in Zion

Conservation Status

- LC Least Concern
- VU Vulnerable
- NT Nearly Threatened
- CR Critically Endangered
- EX Exotic Introduced

Do you have an interesting bird sighting? Records are lacking for numerous species. Your observations of uncommon or rare species, or of any birds exhibiting unusual behavior, can provide the National Park Service and the birding community with valuable data. Natural History Observation Cards are available at visitor centers or entrance stations. Below is a checklist of the information needed as a reminder while you are in the field. Please be specific.
