National Register of Historic Places Registration Form

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in National Register Bulletin, *How to Complete the National Register of Historic Places Registration Form*. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. **Place additional certification comments, entries, and narrative items on continuation sheets if needed (NPS Form 10-900a).**

1. Name of Property

historic name Vienna High and Industrial School
other names/site number Vienna High School, Vienna Elementary School

2. Location

street & number 216 9th Street not for publication
city or town Vienna vicinity
state Georgia code GA county Dooley code 093 zip code 31092

3. State/Federal Agency Certification

As the designated authority under the National Historic Preservation Act, as amended,
I hereby certify that this X nomination ___ request for determination of eligibility meets the documentation standards for registering properties in the National Register of Historic Places and meets the procedural and professional requirements set forth in 36 CFR Part 60.
In my opinion, the property X meets ___ does not meet the National Register Criteria. I recommend that this property be considered significant at the following level(s) of significance:
___ national X statewide ___ local
David C. Crass 24 OCT '12
Signature of certifying official/Title Date
Dr. David C. Crass/Historic Preservation Division Director/Deputy SHPO
Historic Preservation Division, Georgia Dept. of Natural Resources
State or Federal agency/bureau or Tribal Government

In my opinion, the property ___ meets ___ does not meet the National Register criteria.
Signature of commenting official Date
Title State or Federal agency/bureau or Tribal Government

4. National Park Service Certification

I hereby certify that this property is:
 entered in the National Register determined eligible for the National Register
 determined not eligible for the National Register removed from the National Register
 other (explain:)
Jon Deane 12/19/12
Signature of the Keeper Date of Action

Vienna High and Industrial School
 Name of Property

Dooly County, Georgia

Narrative Description

(Describe the historic and current physical appearance of the property. Explain contributing and noncontributing resources if necessary. Begin with a **summary paragraph** that briefly describes the general characteristics of the property, such as its location, setting, size, and significant features.)

Summary Paragraph

The Vienna High and Industrial School is a large, sprawling, high school built in an African-American neighborhood between the Southern Railway line and the Georgia Route 27 on the east side of Vienna in Dooly County in south Georgia. Completed in 1959, the high school, which was designed by the Atlanta architectural firm of Stevens and Wilkinson, measures 29,000 square feet and is among the largest "equalization" schools in the state. The school is an excellent example of the International Style with its flat roof, banks of metal-framed windows, and lack of ornament. The school was constructed with steel framing, concrete-block walls, and brick veneer. The long rectangular floor plan includes two interior courtyards that brought light to the interior of the building and served as outdoor classrooms. The campus also includes a cafeteria/auditorium building and an industrial shop.

Narrative Description

The Vienna High and Industrial School is a large, sprawling, high school built in an African-American neighborhood between the Southern Railway line and Georgia Route 27 on the east side of Vienna in Dooly County, Georgia. The International Style school was designed in 1955 by the Atlanta architectural firm of Stevens and Wilkinson and completed in 1959. The campus includes the school building, a cafeteria/auditorium, and an industrial shop. The school sits on a low rise with a circular drive with a line of pecan trees in the center. A smaller, circular drive is located at the rear (east) entrance.

Vienna High and Industrial School is among the largest equalization schools in the state and is larger than any block of buildings in Vienna (photos 1-13). The long, rectangular building measures 29,000-square feet and includes 23 classrooms. (The largest, Waynesboro High and Industrial School in Burke County, had 60 classrooms) Like most equalization schools in Georgia, Vienna High and Industrial School is a one-story building constructed on a poured-concrete foundation. The building is steel-framed with concrete-block infill and clad in brick. The flat roof, banks of metal-framed windows (photos 9-11), and lack of ornament are characteristics of the International Style.

The recessed main entrance on the west side of the building features a heavy roof slab supported by thin metal posts (photo 17). The administrative offices are located in the lobby off the main entrance (photo 18). The long, rectangular interior plan includes two interior courtyards that provide light and air to interior classrooms and corridors. In good weather, the courtyards served as outdoor classrooms (photos 23-24, 33-34). For the Vienna High and Industrial School, the architects designed floor-to-ceiling awning windows in the corridors and two glazed corners to draw light from the south courtyard (photos 21-23, 25, 29-30). Clerestory windows in the classroom allowed light in to the corridors (photo 26, 35). The windows, which have been covered with sheet metal and plywood for protection, include concrete sills and remain mostly intact (photos 11, 16).

The interior corridors are plain with concrete-block walls with linoleum-tile floors, and visible steel framing (photos 21, 25-26, 30, 32, 35). Some lockers remain in the corridors (photo 32). The classrooms are also plain with concrete-block walls and steel framing visible in the ceiling (photos 28, 36-37). Each classroom included a blackboard, though most have been removed, and banks of steel-framed windows. The interior courtyards are overgrown, but still contain historic plantings, such as cherry and cedar trees (photos 23-24, 33-34). The library, the largest room in the school, opens onto the north courtyard (photo 31). Restrooms for boys and girls include sinks and toilets with glazed-block partitions and walls (photos 27).

The campus also includes a cafeteria/auditorium building, which is joined to the southwest corner of the school by a glazed corridor (photo 4), and an industrial shop to the north, which is connected to the school by an open breezeway (photos 7-8). The cafeteria is a large, square one-story building covered in brick veneer with a flat roof (photo 4). It includes exposed roof trusses and a floor-to-ceiling glazed wall on the north side (photos 38-39). The walls, like the rest of the school, are concrete block. The original light fixtures hang from the ceiling. The open interior plan features a stage on the west end and the kitchen on the south side.

Vienna High and Industrial School
Name of Property

Dooly County, Georgia
County and State

The industrial shop is a rectangular one-story building clad in brick veneer with a flat roof (photos 5-6). The north side features a glazed window wall that provides light to the six classrooms. The clerestory windows on the south side illuminate the single-loaded corridor. The interior includes exposed roof trusses and concrete-block walls (photos 40-41).

Contributing and Noncontributing Resources

Vienna High and Industrial School includes three contributing buildings: the main school building, industrial shop, and cafeteria. The designed landscape is counted as a contributing site because of the historic circular drives at the front and rear entrances and because of the pecan trees that shade the front drive. There are no noncontributing resources associated with this nomination. The gymnasium, completed in 1960, and the athletic field, are no longer owned by the City of Vienna and are not included in the nomination (photo 42).

8. Statement of Significance

Applicable National Register Criteria

(Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing.)

- A Property is associated with events that have made a significant contribution to the broad patterns of our history.
- B Property is associated with the lives of persons significant in our past.
- C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- D Property has yielded, or is likely to yield, information important in prehistory or history.

Criteria Considerations

(Mark "x" in all the boxes that apply.)

Property is:

- A Owned by a religious institution or used for religious purposes.
- B removed from its original location.
- C a birthplace or grave.
- D a cemetery.
- E a reconstructed building, object, or structure.
- F a commemorative property.
- G less than 50 years old or achieving significance within the past 50 years.

Areas of Significance

(Enter categories from instructions.)

- Architecture
- Education
- Social History
- Ethnic Heritage: Black

Period of Significance

1959-1970

Significant Dates

1959 – Vienna High and Industrial School was completed.

1970 – Vienna High was racially integrated.

Significant Person

(Complete only if Criterion B is marked above.)

N/A

Cultural Affiliation

N/A

Architect/Builder

Stevens and Wilkinson (architect)

Period of Significance (justification)

The period of significance begins in 1959, when the Vienna High and Industrial School for African-American children in Dooly County was completed and ends in 1970, when the school was racially integrated.

Vienna High and Industrial School
Name of Property

Dooly County, Georgia
County and State

Criteria Considerations (explanation, if necessary)

The Vienna High and industrial School meets National Register Criterion Consideration G because it achieved significance within the past fifty years during the period of racially segregated schools in Georgia that ended in the early 1970s. The Vienna High and Industrial School was the only school available to African-American students from the 1959, when it was built, to 1970, when Dooly County Board of Education desegregated its public schools.

Statement of Significance Summary Paragraph (Provide a summary paragraph that includes level of significance and applicable criteria.)

In the 1950s and 1960s, Southern states embraced a strategy of massive resistance to racial integration in schools and other public places. The state of Georgia constructed modern schools for African-American children in an attempt to appease black communities and to demonstrate that it could operate racially separate and equal public school systems. These new schools for African-American children were built in urban and rural African-American communities throughout the state from 1952 to 1962. The state built nearly 500 new elementary and high schools, including at least one new high school in each county. Designed in the International Style, these schools were larger and more technologically advanced than earlier schools for African Americans. Plans varied in complexity from long, low classroom blocks to sprawling campuses that included libraries, cafeterias, and gymnasiums. The improved academic curriculum, which added higher-level math and science courses, extended beyond the vocational training programs that had been standard for African-American schools so that equalization schools, as they are now called, were a source of pride, independence, and cultural cohesion in African-American communities. By 1970, racial desegregation of the state's public schools resulted in the closure of many African-American schools after little more than a decade of use. The consolidation of black and white school systems left a surplus of schools so that most African-American high schools were either reduced to junior highs, or simply closed and vacated when white-dominated school boards created integrated school systems.

The Vienna High and Industrial School is an excellent example of an equalization school in Georgia and is significant in the areas of architecture, education, ethnic heritage-black, and social history. The International Style school was built in 1959 to accommodate the increasingly overcrowded Vienna County Training School, which was adjacent to the high school. The architects, Stevens and Wilkinson, designed 150 equalization schools in Georgia, including five in Dooly County. The school's 23 teachers taught hundreds of elementary and high school students. In 1970 when Dooly County integrated its schools, the Vienna High and Industrial School was renamed Vienna High School and made into the city's integrated high school. At the time, the high school for whites students was repurposed as an elementary school. Napoleon Williams, the school's African-American principal, remained principal of the integrated Vienna High School. Vienna High served as an elementary school from the late 1970s until 2004, when it was closed and vacated.

Narrative Statement of Significance (Provide at least one paragraph for each area of significance.)

In the decades after World War II, several states in the Deep South built new schools for African Americans in an attempt to maintain two racially segregated school systems.¹ As it fiercely resisted racial integration, the state of Georgia built hundreds of black schools, more than any other state.² The Georgia Department of Education established new statewide curricula for teachers and students and formed guidelines for architects and builders, who designed and constructed hundreds of International Style schools throughout Georgia. The state's campaign to modernize its schools, both black and white, resulted in some of the first modern schools constructed in rural communities across Georgia.

¹ Portions of this context were presented at the annual meeting of the Vernacular Architecture Forum in Washington, D.C., in 2010.

County and State

The rise of modern African-American schools in Georgia in the 1950s strengthened black communities throughout the state. Parents and students have described the schools as a source of pride. Teachers, who held some of the best-paying jobs for blacks in rural Georgia, could then support black businesses in the community. The auditoriums, large enough to seat an entire community, provided space for student plays and band concerts. In the 1960s and 1970s, when school systems across Georgia eventually desegregated, many of the newly built black schools were closed and vacated after only a decade or two of service. Black communities that relied on the schools as important social institutions were devastated by their loss.

Georgia Schools before World War II

Following Reconstruction, schools systems in Georgia maintained racially segregated public school systems in which black schools suffered from inadequate funding. Local school boards allocated funds on an unequal basis, often illegally skirting the United States Supreme Court decision, *Plessy v. Ferguson*. The 1896 *Plessy* ruling required that all public accommodations must be separate and equal. Black schools almost always had insufficient facilities.³ Black children, excluded from white school systems, attended school in church basements, lodge halls, and run-down shanty schools with leaky roofs and drafty walls and windows. These schools were poorly equipped, overcrowded, and led by teachers who were paid less than their white counterparts. In 1946, a grand jury reported the poor conditions of black schools in the Atlanta suburb of DeKalb County, Georgia:

While most of the white schools are reasonably well housed and the children equipped with books and supplies, the black school buildings and equipment are either borrowed church buildings or poorly constructed buildings in out-of-the-way places, which colored people have paid for with their own collections. Your Committee found that these children were huddled around defective stoves, travel as much as five miles without bus transportation and, in many cases, without lunch.⁴

Northern philanthropists led efforts to reform black education in the South during the Jim Crow era. The Rosenwald Fund, among the most influential school reform programs, advocated extending the school term for black students, increasing compensation received by black educators, subsidizing transportation for black students, and supporting the development of libraries.⁵ Rosenwald's primary effort was to provide standardized plans for improved black schools and matching funds to build them. These schools, which ranged in size from one- to seven-teacher school buildings, featured large, well-lit classrooms, industrial rooms, and sanitary privies. Between 1912 and 1932, the Rosenwald Fund contributed to more than 5,000 schools in 15 Southern states, so that by 1928 one in five rural schools for African-American students in the South was a Rosenwald school.

The Rosenwald Fund relied on the local support of county school superintendents who saw the fund as a way to augment scarce county and state funds. Superintendents negotiated among black citizens, local school boards, and state departments of education for donations of land and construction funds.⁶ The Cusseta Industrial High School in west Georgia (listed in the National Register in 2011) was typical of Rosenwald funding arrangements. The school, completed in 1930, was built at a cost of \$2,973 with local taxpayers contributing \$1,973, blacks \$250, and the Rosenwald Fund \$750. In the 1920s and 1930s, the Rosenwald Fund contributed to 259 schools in 103 counties in Georgia. Rosenwald schools

County and State

were some of the most technologically advanced schools available to black students in Georgia after World War II when the state government initiated the first statewide reform of black schools.⁷

Georgia Builds Modern Schools

In 1949, Georgia Governor Herman Talmadge initiated the Minimum Foundation Program for Education. This comprehensive legislation sought to eliminate geographic, class, and, eventually, racial disparities in education through improved curricula, better training for teachers, and a uniform nine-month school term. In 1951, Talmadge pushed through the state's first sales tax of three percent, which was dedicated to new school construction.⁸ By 1955, Georgia had spent nearly \$275 million on public schools, more than almost any other Southern state. Georgia spent five times more on schools than Mississippi and eight times more than Alabama. By the time Talmadge left office in 1954, 53 percent of the state's budget went to education.⁹

The Minimum Foundation Program for Education enabled the state to build hundreds of new, modern schools for African Americans to equalize the disparities between white and black schools, as mandated under *Plessy*. The state intended that these new schools, now called equalization schools, would sustain two racially segregated school systems.¹⁰ In the decade between 1952 and 1962, the state built roughly 1,200 schools, 700 for whites and 500 for blacks. The governor's plan replaced over 3,000 small, poorly built black schools with larger, better-equipped, consolidated elementary and high schools. The plan called for at least one new black high school in each of Georgia's 159 counties.¹¹ The John Lewis School in Ellaville for example, completed in 1957, replaced Schley County's 11 black schools, including nine one-room schools. By 1956, the total number of black schools statewide was consolidated to 1,058, with many of the small, outdated schools replaced with modern buildings.¹²

The State School Building Authority managed the construction of new schools in Georgia in cooperation with local school districts and the State Board of Education. The state legislature established the authority in 1951 as an independent corporation that would issue bonds and build schools throughout the state. Spending priorities were established by the State Board of Education, which developed a formula for allocating funds to local school systems, based on a space allotment per student at \$7.50 per square foot plus ten percent for architect's fees and contingencies.¹³ Its frugality led the department to boast, "There are no 'educational palaces' in Georgia, but there are scores of functional, up-to-date school buildings."¹⁴

Dooly County, Georgia
County and State

The State School Building Authority adopted design standards for classrooms and other school facilities and it established requirements for types of construction, fire safety, lighting, and sanitation.¹⁵ In 1952, the *New York Times* reported that Georgia's "model-type southern schoolhouse," comprised a "brick-faced, concrete-block structure, roofed with steel, asphalt, and gravel, partitioned with pastel-shaded concrete-block walls, and floored with concrete."¹⁶ State officials were especially impressed by the half-a-dozen modern elementary schools that had recently been built in the growing Atlanta suburb of DeKalb County. Designed by Atlanta-area architects, these schools, including Medlock, Leslie J. Steele, and Toney elementary schools were models of cost-effective modern design. Toney Elementary School, designed by Bothwell and Nash, is L-shaped with an administrative wing with offices, clinic, library, and restrooms and a classroom wing with 22 classrooms and a cafeteria. Toney, completed in 1953, as well as Medlock and Steele, were built with cost-effective concrete-block walls, steel-framed windows, and steel roof framing. These schools were designed to accommodate growth and in many DeKalb County schools the architects returned to build additional classrooms.

The E. Rivers School in Atlanta, designed by the Atlanta firm of Stevens and Wilkinson in 1949, is among the first modern schools in the state and served as a model for subsequent school designs funded by the State School Building Authority.¹⁷ The school's E-shaped plan featured three single-loaded classroom blocks and a 600-seat auditorium that stemmed from the main administrative wing. Classrooms were lit by steel-framed windows, panels of glass block, and fluorescent lights. The architects, through the use of standardized structural details and multi-use concrete forms, designed the school for \$8.82 per square foot. This cost was significantly less than Fulton County's average of \$9.30 and Atlanta's average of \$12 to \$14, but exceeded \$7.50 per square foot, which the State School Building Authority later required to receive grants under the Minimum Foundation Program for Education.¹⁸

The E. Rivers School, like nearly all of Georgia's new schools, was designed in the International Style. The style's clean lines, lack of ornament, and emphasis on modern materials and technology enabled schools to be built quickly and less expensively than traditional wood-frame or masonry buildings. Moreover, in adopting the International Style, the State School Building Authority made an aesthetic break from previous generations of small, inadequate schools. The state relied on the International Style, which appeared new and forward looking, to build a statewide system of schools that it hoped would embody the future of education in Georgia.

Stevens and Wilkinson believed the E. Rivers School would receive an "awful lot of criticism from local people. We thought they expected Greek columns. Well, they're just crazy about the school. They won't say if they like the outside, but they think it's wonderful on the inside."¹⁹ By the mid-1950s, school districts across Georgia had embraced the International Style for both white and black schools. In most counties, there was almost no architectural distinction between white and black schools, with high-style and plain examples built for both races.

The State School Building Authority allowed local school districts the option of using its stock plans or hiring an architect whose design was required to conform to the state's design specifications. Most school districts developed site-specific plans with an architect, an expense they factored into the cost of construction.²⁰ School districts throughout the state hired architects, including the local firms of Edward Vason Jones in Albany and Johns and Associates in Gainesville. The Atlanta firms of Finch Alexander Barnes Rothschild and Paschal, also known as FABRAP, designed 15 schools; Cuttino and Associates designed nearly 50 schools; and Bodin and Lamberson designed 100 schools, mostly in the Atlanta area and in north Georgia.

Vienna High and Industrial School
Name of Property

Dooly County, Georgia
County and State

The Atlanta firm of Stevens and Wilkinson received commissions for 150 public schools in 26 counties statewide, more commissions than any other firm during this period.²¹ Between 1952 and 1957, the firm completed large and small commissions that ranged in size from a single school building to comprehensive plans to rebuild entire county school systems. In 1952 and 1957, Washington County commissioned the firm to design 13 schools, including seven black schools. Rural Baldwin, Calhoun, Chattooga, Dooly, Rabun, Sumter, and Union counties commissioned five or more schools from the firm. Stevens and Wilkinson later returned to many school districts to design additions, annexes, gymnasiums, cafeterias, and new heating and lighting plans.²²

During the peak of school construction, DeKalb County in the Atlanta metropolitan area dedicated ten new elementary schools and three new high schools on the same day in December 1955.²³ DeKalb's new schools provided classrooms for more than 12,000 students. Five of these schools were black schools intended to replace what the county identified as "colored schools . . . in extremely poor condition."²⁴ In a second mass dedication ceremony in October 1958, DeKalb County opened sixteen more schools.

DeKalb County needed these new schools to support its burgeoning suburban population in an area that had been mostly farmland before World War II. By 1940 DeKalb, unique among Georgia counties, had a large industrial sector and more than half its population lived within Atlanta's city limits on the county's western edge. In the 1950s, DeKalb's increasing population—spurred by new transplants to the Atlanta metropolitan area, white flight from city to suburbs, and a rising birthrate—resulted in one of the largest school systems in the state. In 1952, the county estimated that 75 new students arrived at its schools every Monday.²⁵ DeKalb struggled to keep up with growth by building on average more than five schools each year for 20 years.²⁶

New schools, both white and black, included classrooms, administrative areas, restrooms, a library, and a cafeteria. Auditoriums and gymnasiums, which were not part of the standard plan, could be funded with dollar-for-dollar matching grants after the basic requirements had been met. Small schools comprised a single block of classrooms and a cafeteria. Sometimes called a cafetorium, the cafeteria was a multipurpose space that combined the functions of a cafeteria and an auditorium. Auditoriums and gymnasiums were sometimes built as freestanding structures that could be entered through a breezeway for evening activities when the school was not in session.

Larger schools featured multiple classroom blocks built around landscaped courtyards. Eastview Elementary School in Americus, designed by Stevens and Wilkinson, featured four classroom blocks with steel-framed windows and flat roof. Covered breezeways protected the south Georgia students from sun and rain as they made their way to the cafeteria and as they arrived and departed by bus. The architects reduced building costs by using standardized construction methods, such as welded-steel frames, concrete-block walls, brick veneer, and pre-cast roof decks. Costs were further reduced by the elimination of ornament.²⁷ The architects dispensed with traditional interior finishes, such as plaster walls and wood trim, in favor of exposed steel roof framing and painted concrete-block walls.

County and State

Eastview classrooms were flooded with natural light that streamed through skylights, clerestory windows, and glass-curtain walls, reducing the need for fluorescent lamps. Stevens and Wilkinson used glass-curtain walls to brighten corridors and to transform libraries and cafeterias into crystalline pavilions.

Steel-framed windows were built as curtain walls in the majority of equalization schools across the state to provide classrooms with lighting and ventilation. Large expanses of metal-framed windows distinguished Georgia's new schools as modern even though the only choice in school windows was steel-framed or the more expensive aluminum-framed windows. In 1949, the Commission on American School Buildings considered only metal-framed windows as it promoted bilateral and multilateral lighting for the "modern school program." Light from multiple sources rather a single source, the administrators believed, "tends to distribute more evenly than the natural light coming into a room," such as "clerestory light above dropped corridor roofs, high window sash opening on lighted or open corridors, windows on two or three sides of a classroom . . . and skylights over classrooms."²⁸

The largest equalization schools were built for over 40 teachers and hundreds of students. Carver Heights Elementary School in Columbus supported 38 teachers in seven parallel classroom blocks.²⁹ The Vienna High and Industrial School, which included classrooms for 23 teachers, was the largest building in Vienna, larger than the county courthouse or any block of downtown commercial buildings in the south Georgia town. Designed by Stevens and Wilkinson and completed in 1959, the school included separate buildings for the gymnasium, cafeteria, vocational shop, and the classroom building. Glass-curtain walls span its east and west elevations and form the walls of its two interior courtyards. The courtyards served as gardens and outdoor classrooms and provided daylight to the 400-foot-long main corridors and smaller cross-corridors.

African Americans Embrace Their Modern Schools

In the 1950s and 1960s, African Americans throughout the state embraced their new equalization schools. They were staffed with professionally trained black teachers who taught an improved academic curriculum. Students enjoyed classrooms, libraries, and science labs, which were substantially upgraded from the facilities found in previous generations of black schools.

In many rural counties, equalization schools were among the first modern buildings, but for some black students the school's architectural style mattered less than the basic amenities they included, such as cafeterias serving hot lunches, having central heat, and flush toilets. In north Georgia, E. E. Butler High School in Gainesville impressed guidance counselor Charles Morrow when it opened in 1962: "The physical plant itself was something to be proud of because it truly was the latest thing—state of the art . . . no corners were cut; it was first class all the way."³⁰

Sports and other extracurricular activities ensured that these schools were woven into community life. E. E. Butler was, according to a former teacher, "the center of the community. . . . Most of your activities centered around the school, and the school was basically open for at least eighteen hours a day because you had the sports activities and then you had the club activities."³¹ Black businesses closed on game nights and the neighborhood turned out for the Butler Tigers. The marching band brought fans to their feet when it played during halftime and drew cheering crowds when it marched down Main Street past businesses where black patronage was not always welcome.

²⁸ *American School Buildings: Twenty-Seventh Yearbook*. (Washington, D.C.: American Association of School Administrators, 1949), 227-228; Glass-curtain walls often produced classrooms that were too hot in summer and too cold in winter. This was apparent to the principal at E. Rivers School in 1951 and is the reason that so few glass-curtain walls survive from mid-20th-century schools in Georgia. "Better School," 162.

Equalization schools trained future leaders in student government councils and hosted club activities, including clubs for business, science, industrial arts, and chapters of New Homemakers of America and New Farmers of America.³² Drama clubs and chorus performed special programs for the community and parents returned to school for adult education classes, such as home economics and interior decorating.

The state of Georgia built equalization schools in the hope that blacks would accept segregation in exchange for improved school facilities. Equalization schools were an improvement over earlier black schools, but they were not equal to white schools. Day-to-day operations were underfunded and many schools were overcrowded from the first day of class. The interiors were filled with secondhand desks and used textbooks passed down from white schools. Sports also suffered because equalization schools seldom had sufficient athletic facilities. The Vienna High and Industrial School played football games at the white high school stadium on days it was not used by the home team. Lacking basic equipment, the track team at E. E. Butler jumped over chairs in practice because the school did not own proper hurdles.³³

Geography represented another inequity for equalization schools, which were often located at the margins of a school district. There were no state funds available for site acquisition and development, which was considered the responsibility of local boards of education. Rural school districts, which may not have previously operated any black schools, sought inexpensive or donated property in black communities. Black schools were sometimes built a block or two from railroad lines and the attendant industrial plants and warehouses. In other cases, they were built at the far end of black neighborhoods. D. F. Douglass High School, built on a bluff above the Flint River, was the westernmost building in Montezuma. In Ellaville and Good Hope, black schools were built on inexpensive farmland beyond the city limits. Schools in Americus and Carrollton were built on lots crowded in by cemeteries. Trinity High School in the black Beacon Hill neighborhood in Decatur was sited on ground so low it flooded during moderate rainstorms.

Georgia Desegregates its Public Schools

Brown v. Board of Education, a decision handed down by the United States Supreme Court in 1954, dismantled the legal basis for racial segregation in schools. But it came with no timetable for implementation. Southern states exploited this ambiguity in their efforts to resist racial integration and, between 1954 and 1964, Southern states passed more than 450 laws to circumvent the court's decision. Known as massive resistance, this movement centered on school segregation but also resurrected emblems of the Confederacy to preserve the so-called "Southern way of life."³⁴

In November 1954, Georgia voters approved an amendment to the state constitution that allowed the governor, then Herman Talmadge, to close down the public school system to avoid integration. Approved six months after the *Brown* ruling, the law, which was never invoked, provided vouchers for students to attend private schools and permitted the state to withhold funds from any school that allowed white and black children to attend school together.

The state of Georgia, through its equalization schools, attempted to improve black schools but not so much as to upset the status quo among whites. State officials mostly intended to demonstrate to the federal courts that Georgia was in step with the "separate but equal" doctrine, which it had vigorously denied for the previous half century. By 1960 however, it was clear to state leaders in Georgia that massive resistance and modern black schools were not going to put off racial integration.

In 1959, a U.S. District Court judge ruled that Atlanta's segregated public school system was unconstitutional, and two years later the city began the process of desegregating its schools. The violent protests seen in other cities across the South were avoided in Atlanta, although many white families quietly moved to the suburbs rather than face integrated public schools. By the mid-1960s, several formerly white schools in Atlanta had become predominantly black. Kirkwood Elementary School (listed in the National Register in 2002) re-segregated on the first day of integration in January 1965 when Kirkwood's white faculty and students were transferred to area white schools and were replaced with black teachers

and 500 black students. In 1973, the consensus of the federal district court, the Atlanta Public School System, and community leaders was that racially integrated schools in Atlanta were no longer possible because there "simply were not enough whites" left "to go around."³⁵

In response to the Civil Rights Act of 1964, public school systems in rural Georgia adopted "freedom of choice" plans that allowed students to choose the schools they wished to attend with the result that few black students in any district, facing physical and verbal abuse, elected to attend a white school and almost no white students attended black schools. In Thomasville, city leaders encouraged a few black teachers and students to voluntarily attend white schools to lay the groundwork for future desegregation.³⁶ This effort did not include white teachers or students attending black schools. The "freedom of choice" plan adopted by Webster County was more typical of the state's rural school systems. In 1969-1970, the south Georgia county's 654 students were taught at two campuses: white elementary students attended Webster Elementary in Preston; black students, who comprised 80 percent of students in the school system, attended Lowery two miles away. Contrary to the goals of "freedom of choice" plans, the county assigned students to schools so that five black students, less than one percent of blacks in the school system, attended Webster alongside 129 white students; but no white students attended Lowery, which continued to operate as an all-black school.³⁷ In 1968, the federal courts ruled that "freedom of choice" plans were unconstitutional because they preserved dual race-based school systems.³⁸ In the 1969-1970 school year, the last 81 public school systems in Georgia, facing the loss of federal funds, integrated their schools.

Racial integration of public schools in Georgia resulted in upheaval across the state. Though *Brown* was decided 16 years earlier, many whites continued to fight for segregated schools until 1970 and were unprepared for the eventuality of integrated schools. Desegregation was difficult and contentious in every school district and sometimes resulted in violence. In the small town of Cusseta, hours before the bell on the first day of the first integrated school year, arsonists destroyed the town's only school. Within a week, an African-American church was burned to the ground and a tear gas bomb was thrown at a black family's home, in an effort to intimidate blacks in Cusseta from registering for school.³⁹

In response to racial desegregation, whites in large numbers left public school systems. In cities and rural counties, white parents formed segregated private academies to avoid racially integrated schools. Between 1967 and 1970, the number of students enrolled in private primary and secondary academies in Georgia increased fivefold to more than 50,000. Private academies developed into alternative school systems that decreased communitywide participation in public schools. They reduced the number of white students in public schools, especially in counties in south Georgia with majority African-American populations.⁴⁰ Americus, in its first year of racially integrated schools, lost much of its white enrollment to newly formed private academies.⁴¹ In nearby Montezuma, whites left the public schools in such large numbers that the black D. F. Douglass High School remained an entirely black school after desegregation in 1970.⁴²

African Americans Lose Control of Their Schools

In rural school districts across the state, the process of desegregation exacerbated divisions between white and black communities. Racial animosity surfaced when parents and students perceived they had little control over changes they were being forced to accept. The interests of black communities were often ignored as white school boards accommodated white parents and students by reducing black high schools to middle schools, or closing black schools altogether in favor of white high schools. Douglass High School in Thomasville was reduced to a middle school when Thomasville integrated its public school system in 1970. Excelsior High School in Rochelle was made a middle school when Wilcox County integrated its schools that same year.

Another result of racial integration was that fewer black administrators and teachers were retained in newly desegregated school districts. Principals and teachers were traditionally leaders in the black community.⁴³ They were college-educated professionals with degrees from black colleges, such as Clark and Morris Brown colleges in Atlanta, Fort Valley State College in Fort Valley, Georgia, and the Tuskegee Institute in Alabama. Frederick D. Harrold, principal of the John Lewis School in Ellaville from 1936 to 1969, received his bachelor's degree from Morris Brown and later attended New York University and Columbia University.

Principal was the highest position that a black administrator could achieve during segregation. Some black principals were retained as assistant principals in integrated schools, some returned to the classroom, or some were forced out. The principal of Douglass High School in Thomasville was demoted to assistant principal of the white high school and, in Rochelle, the principal of Excelsior High School was made principal of the high school for only one year. Ulysses S. Bias, principal of E. E. Butler, left Gainesville rather than serve as assistant principal in the integrated high school.⁴⁴ David Thomas, who taught at Butler and was later principal at Vienna High School, earned his certificate in administration, only to find administrative positions in newly integrated schools difficult to come by. The state "zapped the black principals right quick," explained Thomas. "Over a period of years they almost washed the state clean of black administrators" and "they didn't want to make any more. . . . The time of integration was the demise of black administrators in the state of Georgia."⁴⁵

Black teachers sometimes found there were not enough classrooms available in desegregated school systems. In Rochelle, only ten of Excelsior's 50 black teachers were retained when Wilcox County desegregated its schools in 1970. The Gainesville City School District was constantly fighting charges that it unfairly dismissed African-American teachers. In the 1966-1967 school year, Gainesville schools employed 115 white and 70 African-American teachers, but in the 1970-1971 school year, the system employed only 22 black teachers, a decrease of 68 percent. The district's hiring practices were even more discriminatory; between 1968 and 1971, the school system hired 99 white and only three black teachers, prompting the U.S. Department of Health, Education and Welfare to advise the school system that "an active recruiting and hiring program is essential to repair the erosion of Negroes in your faculty and staff . . ."⁴⁶ Without jobs in the classroom, many teachers moved to new towns to find teaching jobs or chose different professions.

In small communities the integration of public schools resulted in the decline of the black middle class and reduced the overall prosperity of the black community. In rural Georgia, where most black employment was limited to manual labor and domestic help, teachers and principals held some of the highest paying jobs available to African Americans. "We didn't have lawyers, bankers, architects," explained David Thomas, former principal of Vienna High School. "The most

prosperous jobs [for African Americans] in small communities were teachers."⁴⁷ With their higher salaries, administrators and teachers supported black businesses and churches, which relied on their weekly donations.⁴⁸

The Loss of Equalization Schools Devastates Black Communities

Black communities were further devastated by the closing of equalization schools in favor of white schools. Equalization schools were built to support two school systems, but racial integration resulted in communities having more schools than needed. Faced with the choice, most counties closed their black schools rather than have white children travel to a black neighborhood to attend a formerly black school. DeKalb County closed its eight black schools between 1967 and 1970, less than 15 years after the groundbreaking and ribbon-cutting ceremonies.⁴⁹ The Gainesville Board of Education closed E. E. Butler High School in 1969, just seven years after it opened. The city's black students were bused to the smaller Gainesville High School, which had been built in 1920. "By their actions," writes Winfred A. Pitts, "the white community was, in effect, saying to the black community: Your pride and joy [E. E. Butler] is unacceptable to us. We would rather use our old, dilapidated buildings than go to a new school in the middle of 'nigger town.'"⁵⁰

Black parents and students fought to save their schools with marches, protests, and boycotts. In Glascock County, African-American parents approved a resolution that read: "We go on record as favoring separate schools for the white and colored races and especially request that our schools be kept separate from the whites and that our children be taught by colored teachers in keeping with the traditions that existed in Glascock County throughout all these years."⁵¹ In April 1969, when DeKalb County announced the closing of Hamilton High School, black students walked out of school to join their parents in a protest march to the county courthouse.⁵² "It was everything to us," a former student remarked. "It was the center of the community, its heart and soul."⁵³

Blacks had little influence in the process of desegregation, and many black schools were removed from county school systems as white school boards simply closed and vacated schools built for African Americans. The Gainesville City School District mostly ignored the will of the black community when it closed E. E. Butler. "To me it was not equitable," said Linda Hutchens, a 1966 graduate, "we were not consulted; we had very little input. . . . I was in favor of desegregation, but I thought that it would have been more equitable had they used both schools."⁵⁴ Former Butler teacher Nathaniel Shelton explained the sense of resignation within the black community: "They [African Americans] didn't like it. Most of them did not want Butler to be closed, but they also knew that was probably what was going to be done anyway. That was the way things usually happened, and they figured that's the way it would be."⁵⁵

The Martin Elementary School in Bronwood (listed in the National Register in 2008) operated for only 16 years before it was closed in 1970. When completed in 1956, the south Georgia school was a dramatic improvement over the earlier substandard schools for blacks in rural Terrell County. The Martin school taught kindergarten through eighth grade and

County and State

included Bronwood's only library. When the county school board closed the Martin school, Bronwood's students were bused ten miles to a former white elementary school in the next town.

Entire campuses, such as Main High School in Rome (listed in the National Register in 2002), were closed as a result of desegregation. Student enrollment at Main, the only public school for African Americans in Rome, had increased after World War II. Between 1955 and 1963, the school district, determined to maintain racially segregated schools, built six new buildings on the Main High School campus, including a gymnasium, high school, high school annex, elementary school, and two elementary school annexes. But in 1969, when Rome desegregated its public schools, the school district closed Main High School, with its campus of new buildings, and divided its students among the city's previously white high schools.⁵⁶

The closing of equalization schools, such as the Martin Elementary School and Main High School, devastated African-American communities. Residents were stripped of the independence and control that came with operating their own schools. Moreover, communities had organized around their schools; their closing resulted in the loss of social and cultural cohesiveness. When the Martin school closed, the black community in Bronwood lost a place to hold school functions and it lost an important institutional organization that planned and coordinated social events in the community. More significantly, without a school, the black community had fewer reasons to gather throughout the year. Main High School in Rome was the hub of the black community and without it community life was substantially diminished.⁵⁷

Memory was also lost as black schools closed and their students merged into existing white schools, losing many of the activities and artifacts that recalled the history of their schools. Black students lost their school colors, mascots, school songs, newspapers, and yearbooks.⁵⁸ A former student of Main High School in Rome described integration as "a way of getting rid of your heritage and being put into somebody else's heritage."⁵⁹

The state's campaign to build new schools in Georgia in the 1950s, the largest statewide effort undertaken to improve schools, resulted in hundreds of modern African-American schools. In 1949, when the Georgia legislature approved the Minimum Foundations Program in Education, the state sought to improve educational opportunities for all children in Georgia, black and white. Within a few years, the reform program had become the primary means for the state to convince the federal courts of the validity of the "separate, but equal" doctrine. The state constructed over 1,000 new, modern schools across Georgia, including 500 schools for blacks, which appeared as modern as the schools built for white students. Though funding for black education continued to lag behind that spent on whites, equalization schools were a vast improvement over previous black schools. The state, in building new, modern schools, created the illusion of equality, and for two decades blacks built communities around their schools. But school boards, acting in compliance with desegregation mandates, closed or marginalized many of these schools, their students assigned to formerly white schools. Equalization schools, which had provided black communities with a measure of control since the early 1950s, had by 1970 become another casualty of white dominance over black institutions in the last days of Jim Crow in the South.

Vienna High and Industrial School

The Vienna High and Industrial School was designed by the Atlanta architectural firm of Stevens and Wilkinson in 1955 and completed in 1959. It is located east of downtown and adjacent to the Dooly County Training School. The County Training School, the only school available to African-America children in Vienna, was built in 1926 with funds from the Rosenwald Fund. The new International Style school was built to accommodate the increasingly overcrowded County Training School. The gymnasium, which is not included in this nomination, was built in 1960. The architects, Stevens and Wilkinson, designed 150 equalization schools in Georgia, including five in Dooly County.

The new school was a source of pride for the black community in Vienna. The school's 23 teachers taught hundreds of elementary and high school students. The courtyards included flower gardens and served as outdoor classrooms. The school, unlike the earlier County Training School, had a library, gymnasium, central heat, and a cafeteria/auditorium that served hot lunches. The school, in addition to the basic curriculum, included programs for Future Homemakers of America and Future Farmers of America, which was taught in industrial shop, along with furniture making. The school also taught adult education classes in the evenings, including home economics. The school produced plays, pageants, and Christmas programs, which were attended by the community. Vienna High and Industrial School, unlike its white counterpart, did not have buses to transport children to school.

The south end of the Vienna High and Industrial School served elementary school grades one and two and the rest functioned as a high school for grades 8 through 12. Grades 3 through 7 were taught in the County Training School. Napoleon Williams served as the high school principal and David Thomas was the elementary school principal.

In 1970, when Dooly County integrated its schools, the Vienna High and Industrial School was renamed Vienna High School and made into the city's integrated high school.⁶⁰ The principal of the white high school, W. F. Stone, worked with Napoleon Williams to develop a strategy for a smooth transition to racially integrated schools. Stone replaced the retiring school superintendent and Williams became the principal of the white school. Vienna is exceptional among Georgia school systems where most integrated schools were held in the formerly white schools and were headed by a white principal. Many white students left Dooly County public schools for white-only private academies. In an effort to bring the students together, the school developed a new mascot with one color from each of the previous schools. The school, at first, had mixed athletic teams, but separate white and black homecoming courts. After Williams retired, David Thomas served as principal in the 1975-1976 academic year and then was appointed to Assistant Superintendent. Vienna High served as an elementary school from the late 1970s until 2004, when it was closed and vacated.

⁶⁰ The high school for white students on 4th Street was known as Vienna High School.
