

## Bird Checklist

### Birding Watching at Craters of the Moon

While stark, barren lavas are the focal point of the 1175-square mile monument, other habitats are well represented: limber pine forest; pockets of Douglas fir and aspen; extensive tracts of sagebrush, other shrubs, and grasses; and a few small riparian zones and wetlands. These attract a variety of birds, and the monument's proximity to other ecosystems — marshes, mountains, forests, and lakes — bring a wide spectrum of migrants and accidentals to the area. A surprising 224 species of birds have been reported at Craters of the Moon.

Few birds remain during the harsh winters. However, some are far northern species, difficult to find in the U.S. and therefore of interest to birders. Spring migrants reach a peak in May, and as summer progresses, more than 100 species may nest. By mid-August, south-bound migrants are visible, pausing here to rest and forage.

Sightings by visitors are important additions to our wildlife records. Please report unusual bird sightings at the visitor center or write to:

Craters of the Moon National Monument  
Resource Management Division  
P.O. Box 29  
Arco, ID 83213

**CODES** These codes reflect the likelihood of finding a given species in appropriate habitat throughout a given season.

<b>A Abundant</b>	Hard to miss	<b>Sp Spring</b>	late March-early June
<b>C Common</b>	Seen most days, easy to find	<b>S Summer</b>	early June-late August
<b>F Fairly Common</b>	Seen annually, but not daily	<b>F Fall</b>	late August-November
<b>U Uncommon</b>	A few are seen most years	<b>W Winter</b>	November-March
<b>R Rare</b>	Scarce, not seen yearly		
<b>O Occasional</b>	Not present most years	<b>* Nesting species</b>	Has been observed nesting at Craters of the moon
<b>X Accidental</b>	Not expected; fewer than 5 records
