LIFE ON THE EDGE

NAME:

DATE:

Awareness, Curiosity, and Wonder

Finding life on the edge requires careful observation and a curious mind. Scavenger hunts help focus our senses on the world around us.

Life Cycles Scavenger Hunt:

1. Find a tree shorter than you.
Name one animal that uses it: _____
How does it use it?

2. Find a tree too big to get your arms around.
Name one animal that uses it: _____
How does it use it?

3. Find a standing dead tree.
Although dead, do you think anything lives in it?

4. Find a log lying on the ground.
What is happening to it?

Nature Detectives: Who's been here?

You can find clues that animals have been nearby in wild places like National Parks or in your own backyard. You might discover clues that show what they eat, where they go to the bathroom, or where they walk.

Find evidence of a plant eaten by an animal.

What part was eaten? _____

Who do you think ate it? _____

Look for some scat.

What have they eaten? (Look for clues like seeds or fur.)

Which animal is it from? _____

Draw the tracks that you see.

Track size:

_____ inches

Connection Reflection

Artwork, poetry and writing are ways to help us relate to the world in which we are connected. In the space below, write and/or draw something that will help you remember your Grand Canyon experience.

I Smell Trouble!

Smells are an important part of relationships between plants and animals. Find three plants that have a smell. Do they smell good or bad to you? Why do you think they smell?

SMELL

Big Sagebrush:

Attract Repel

Describe the smell:

Utah Juniper:

Attract Repel
