

# HOW NOT TO BE A LAVA LOSER

Volcanic hazards can present life-threatening problems in many ways. Look through the USGS publication “**Viewing Lava Safely – Common Sense Is Not Enough**” to help you complete the following activities. These are located at the ranger desk in the Visitor Center or find it on the web at: <http://pubs.usgs.gov/fs/2000/fs152-00/>

**The Name Game:** Name the historically active volcanoes (listed in the USGS publication) located on the island of Hawai‘i: \_\_\_\_\_, \_\_\_\_\_ and \_\_\_\_\_

Which one is erupting at this time? \_\_\_\_\_

How many years has this current eruption been occurring (you may need to do a little math)? \_\_\_\_\_

**Be A Hazard Wizard:** Dangerous situations can occur here in the park if you don’t know what to be aware of. Using the USGS publication for ideas, find as many hazards as you can and then list each under its appropriate heading.

### By Air

### From the Sea

### On the Ground

**Be Prepared:** Circle all of the items you **need** for a **safe** visit to the eruption viewing area:

“**And Now A Message From Our Sponsor**”: Create a two or three line jingle that gives a safety message for visitors who want to see the volcano.

---

---

**Pa‘ahana the pueo says, “Be *akamai* (smart)!”  
It’s fun to visit the volcano, be safe!**

**Discover More . . .** Visit our bookstore at the Kīlauea Visitor Center or Jaggar Museum to find books and videos about lava hazards.
