Information provided is a guide to navigation on Naknek Lake. Operators should still excercise caution and be aware of changing lake levels and weather conditions. Lake depth information is from a dataset that may not account for all obstructions. Many of the locations labeled use local names. Additional comments can be forwarded to the GIS specialist at Katmai (whitney_rapp@nps.gov or 907-246-2145).

Lake Camp

Buoys are shown approximately since they are placed annually to avoid the most significant hazards. White buoys are set near large rocks in the primary channel. The location of rocks changes each year due to ice scour. The rock, known as "Go Rock," just upstream of the Lake Camp docks is a good indicator for lake levels. When the rock is exposed extra caution should be used throughout the lake, particularly in the channel to the lake.

When the water level is high, it is possible to cautiously navigate through the obstruction area north of Coke Bottle Island. The most protected place to leave a boat when at Fures Cabin is on the sand beach to the west of the cabin. A permit from NPS dispatch is required to stay at the cabin.
