Mississippi River Companion - Map Legend

BOATING

Daymark: Navigation markers that include the river mile and usually a light. As with buoys, green marks the left bank when you travel upstream. The left bank is often called the "west bank," even where the river does not run north to south. Red marks the right bank, often called the "east bank."

Power line: Lines do not pose a danger to boats, but they are helpful navigation landmarks.

Wing dam: Rock and brush structure built to focus the river current into the 9-foot channel. Called a closing dam where it blocks a channel or slough. It is often just below the water surface and can damage a boat's hull and propeller .

River mile marker and mid-channel sailing line: A point on a map in the 9-foot mid-channel sailing line used for navigation. They mark the distance from the confluence of the Mississippi and Ohio rivers, near Alton, Ill., so the numbers increase as you travel upstream. Each river mile number notes the location of a place on the map (for example, river mile 849.3 W is a point on the west bank).
