

Resist, Accept, or Direct?

A new report titled [Resist-Accept-Direct \(RAD\)—A Framework for the 21st-century Natural Resource Manager](#) [PDF] was recently published in the National Park Service Natural Resource Report series. The report introduces a decision framework that provides a simple tool that encompasses the entire decision space for managing ecosystems facing the potential for rapid, irreversible ecological change. It assists managers in making informed, purposeful choices about how to respond to the trajectory of change, and moreover, provides a straightforward approach to support resource managers in collaborating at larger scales across jurisdictions.

Disaster Recovery Training is LIVE!

New in the NPS Common Learning Portal:
*Natural and Cultural Resources Disaster Recovery
Training Series*

[View course](#)

Climate change is a significant factor driving the occurrence of natural disasters. As climate change continues to influence the frequency and severity of disasters, cultural and natural resources are exposed to forces for which they were not originally designed. A traditional approach to disaster recovery, informed by the past, may no longer be enough to restore and protect our cultural and natural resources.

A new series of five learning activities on the Common Learning Portal introduces the relationship between climate and natural disasters and provides an overview of what you may encounter while serving as a Disaster Recovery Field Coordinator.

Oh, and did we mention you can earn the cool CLP badge above???
