Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that

found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. carole olson

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Christine Stalter

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Susan Lambert

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Meredith Erickson

The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

The private ranches should be phased out as they have no place in a National Park. The elk fences should be taken down and the elk groupings should be able to mingle and interbreed unfettered by any archaic rules from the past.

On visiting the park, it reminded me of a private game park with its fences limiting the elk's movements and feeding areas.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. Richard Van Aken

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Sherry Gault

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Laura Ortiz

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

Having grown up in California with the Tule Elk as part of our family history, we strongly support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units!!!

You also must officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks. Shame on whoever came up with this plan.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed PERMANENTLY because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease.

The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have NO BUSINESS in our national parks. It is just outrageous that a corrupt small group have bribed and manipulated the system for their own profit. There are other options for the cattle industry!

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs Luana Rubin

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Jade Hurley-Robbins

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Sandy Harmon

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Jan Clare

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Miss Jane Campeau

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that

found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. Lance Brown

I support B to remove the fence!

Also, please:

Ensure cattle do not enter the wilderness area once the 8-foot elk fence is removed;

Enhance and restore habitat for threatened and endangered wildlife within the planning area;

Develop fire management practices within the planning area to maintain healthy ecosystems and natural processes;

Inventory and restore native coastal prairies within the planning area;

Assess climate-related impacts on water resources and native vegetation within the planning area;

Increase public access, use and enjoyment via new trails, camping, and other activities that integrate the planning area into a parkwide trail network

Expand public education and interpretation of Native American culture and history in consultation with the Federated Indians of Graton Rancheria and other descendants of Coast Miwok inhabitants;

Improve public education and interpretation about the Tomales Point elk and their role in the ecology of the Point Reyes peninsula.

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

The Tule Elk needs more space to roam and access to water.

Sincerely, Ms. Nancy Stier

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Dr. Allison Alberts

I support the position taken by Seaturtles.org as stated below.

Please execute Alternative B, Unconfined Elk Herd and Pierce Ranch Core Area.

Thank you, National Park Service, for finally listening to the overwhelming voice of the public and removing the elk fence from Point Reyes. Fences are inappropriate in wilderness, and cattle should not be prioritized over wild animals.

Confined native elk dying of thirst and malnutrition in a National Park is not acceptable.

Once the elk fence is removed allowing the elk to roam freely, steps should be taken to avoid any culling, hazing, or harassment of the elk for any reason.

Cattle operations are no longer appropriate in Point Reyes and should be ceased to honor the true charter of our Seashore, stated in the Point Reyes Enabling Legislation as “the maximum protection, restoration, and preservation of the natural environment within the area,” and in the Organic Act of 1916 as to “provide for the enjoyment of the scenery, natural and historic objects, and wildlife in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.”

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Lisa Neste

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, asawana shira

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. RAFAEL Santana

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that

found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. m moran

Please remove the Elk fencing on Pt Reyes/Tomales Point area and ensure cattle do not enter the wilderness area once the 8ft fence is removed. Also enhance and restore habitat for threatened and endangered wildlife within the area as well as fire management practices best know by the Native American culture. It is important to educate the public about the local Native American culture and their contributions to the health and sustainability of our

environment and how this mitigates and prevents present and future climate change.

Thank you, Cyndi Houck

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Maura Rahman

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that

found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Correspondence ID: 6566

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

Sostengo l'"Alternativa B" preferita dal National Park Service per la Tomales Point Tule Elk Reserve a Point Reyes National Seashore, per rimuovere la recinzione e liberare la più grande mandria di alci Tule del parco. Recinzioni e animali confinati non hanno posto nelle unità del parco nazionale.

Inoltre, si prega di abrogare ufficialmente l'attuale regolamento nel piano di gestione generale che consente l'uccisione ("abbattimento") di alci nelle altre due mandrie poiché le mandrie possono mescolarsi quando la recinzione viene rimossa. Mi oppongo a qualsiasi "gestione" letale di qualsiasi animale selvatico nei nostri parchi nazionali.

Infine, l'alce Tule di Seashore non può essere libero, sano e sicuro fino a quando le operazioni private di bestiame non vengono rimosse perché espongono l'alce ai batteri fecali nel suolo, nei corsi d'acqua e negli stagni e alle malattie del bestiame trasmesse dal letame, inclusa la malattia di Johne. Lo stesso NPS cita uno studio del 1979 che ha rilevato che metà dei caseifici del parco erano infetti dalla malattia di Johne. Le aziende private di bestiame non hanno alcun interesse nei nostri parchi nazionali.

Ringrazio il National Park Service per aver richiesto e preso in considerazione commenti pubblici su questa questione molto importante.

Sincerely, Miss Roberta Giovannini

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. George Blahun Jr

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

Due to time constraints I'm not able to write more than an introductory paragraph to state that the following is pretty much what I'd say had I more time. Please read the following as if I'd personally written the whole thing. Commercial livestock should not be a reason to limit wild animals, it should be the other way around.

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Linda Nosser

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Jessica Kelly

Correspondence ID: 6635

Hello, my name is Samantha, and I am writing today to ask that you please execute Alternative B, Unconfined Elk Herd and Pierce Ranch Core Area. We appreciate the National Park Service, for finally listening to the overwhelming voice of the public and removing the elk fence from Point Reyes. Fences are inappropriate in wilderness, and cattle should not be prioritized over wild animals. Confined native elk dying of thirst and malnutrition in a National Park is not acceptable. Once the elk fence is removed allowing the elk to roam freely, steps should be taken to avoid any culling, hazing, or harassment of the elk for any reason.

Cattle operations are no longer appropriate in Point Reyes and should be ceased to honor the true charter of our Seashore, stated in the Point Reyes Enabling Legislation as "the maximum protection, restoration, and preservation of the natural environment within the area," and in the Organic Act of 1916 as to "provide for the enjoyment of the scenery, natural and historic objects, and wildlife in such manner and by such means as will leave them unimpaired for the enjoyment of future generations."

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Dr. MARK BODZISLAW

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

Stop the murder of our precious Tule elk!

Take the damn fence down now!

We're sick and tired of having private ranchers get subsidized by American taxpayers.

We want to protect our precious wildlife!

Take the damn fence down now.

Too many of our beloved elk have died already. Agonizing deaths, by the way.

Sincerely, Ms. Tina Arnold

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. Dwight Bodycott

Please execute Alternative B, Unconfined Elk Herd and Pierce Ranch Core Area.

Thank you, National Park Service, for finally listening to the overwhelming voice of the public and removing the elk fence from Point Reyes. Fences are inappropriate in wilderness, and cattle should not be prioritized over wild animals.

Confined native elk dying of thirst and malnutrition in a National Park is not acceptable.

Once the elk fence is removed allowing the elk to roam freely, steps should be taken to avoid any culling, hazing, or harassment of the elk for any reason.

Cattle operations are no longer appropriate in Point Reyes and should be ceased to honor the true charter of our Seashore, stated in the Point Reyes Enabling Legislation as "the maximum protection, restoration, and preservation of the natural environment within the area," and in the Organic Act of 1916 as to "provide for the enjoyment of the scenery, natural and historic objects, and wildlife in such manner and by such means as will leave them unimpaired for the enjoyment of future generations."

Of course, the park should take down the fence (Alternative B). My participation in this commenting charade, though, should not be construed as agreement with the bureaucratic, box-checking exercise that the Tomales Point Area Plan (TPAP) appears to be.

For 50 years, the public has made it clear that the ranches should be closed and cattle removed from the park. This single act would make the TPAP moot. Siloing the elk herds does not change this. Yet, the National Park Service and the Seashore continue to obfuscate, parse, and pretend that what they are doing is of historical and cultural value. In fact, NPS will do anything to coddle the ranchers. If park management believed any of it, the cattle would have been eradicated decades ago and the land would have been allowed to heal.

The NPS and Seashore have placed themselves in the well-earned position of having exhausted the public trust. So, please stop with the "protecting natural resources," "preserving historical and cultural resources," "preserving wilderness character," and "improving visitor experiences." You insult our intelligence.

Sincerely, Thomas Bachand

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Barbara Van Dusen

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have absolutely no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I strongly oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations simply have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. Dave Spencer

Dear National Park Service,

Please listen to the overwhelming voice of the public and remove the elk fence from Point Reyes. Fences are inappropriate in wilderness, and cattle should not be prioritized over wild animals. Furthermore, I am making the following points:

1. Please execute Alternative B, Unconfined Elk Herd and Pierce Ranch Core Area.

2. Confined native elk dying of thirst and malnutrition in a National Park is not acceptable. Once the elk fence is removed allowing the elk to roam freely, steps should be taken to avoid any culling, hazing, or harassment of the elk for any reason.

3. Cattle operations are no longer appropriate in Point Reyes and should be ceased to honor the true charter of our Seashore, stated in the Point Reyes Enabling Legislation as “the maximum protection, restoration, and preservation of the natural environment within the area,” and in the Organic Act of 1916 as to “provide for the enjoyment of the scenery, natural and historic objects, and wildlife in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.”

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Miss Amy Dozier

Please execute Alternative B, Unconfined Elk Herd and Pierce Ranch Core Area.

Thank you, National Park Service, for finally listening to the overwhelming voice of the public and removing the elk fence from Point Reyes. Fences are inappropriate in wilderness, and cattle should not be prioritized over wild animals.

Confined native elk dying of thirst and malnutrition in a National Park is not acceptable.

Once the elk fence is removed allowing the elk to roam freely, steps should be taken to avoid any culling, hazing, or harassment of the elk for any reason.

Cattle operations are no longer appropriate in Point Reyes and should be ceased to honor the true charter of our Seashore, stated in the Point Reyes Enabling Legislation as “the maximum protection, restoration, and preservation of the natural environment within the area,” and in the Organic Act of 1916 as to “provide for the enjoyment of the scenery, natural and historic objects, and wildlife in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.”

Correspondence ID: 6757

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Tiffany Coley

Please work toward shifting cattle ranching from our National Seashore to other ranching areas outside of the park. What a difference it would make to have a thriving wildlife habitat, healthy coastal waters and the opening of one-third of our public park for public enjoyment.

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Virginia Huang

OUR FAMILY IS SPEAKING UP FOR TULE ELK! WE ARE TELLING THE “NPS” TO TAKE DOWN THE FENCE BY SEPT. 25!

We are telling the “National Park Service” that we support the proposal to remove the fence for elk, and, we demand that you allow them to roam free (“Alternative B”)!

About one-third of “Tomales Point”'s, elk, herd — or, a, reported, 152 elk — died during California's, 2020, drought, reportedly, from dehydration and starvation! Free-roaming elk outside the, fenced, area did NOT experience the, same, population fluctuations, or, declines!

We MUST speak up, now, for elk and voice our support of “Alternative B”! These elk, already, are facing enough of a threat from climate change, thirst, and, malnutrition — they need all the support they can get!

Our family is, acutely, aware of the opportunity to comment on the, potential, future for the, tule elk, herd, which has been one of the main, focal points for management of the Seashore, especially with the die-offs in the, recent, drought years!

Our family supports an approves “Alternative B” would allow the elk, currently, in a, 2,900, acre area of, poor, forage known as the “Preserve,” to, finally, roam free! It also, would allow the “NPS” to consider building a fence to keep, privately-owned, cattle from entering “Tomales Point”!

We, vehemently, object to the, other, two alternatives would leave the fence where it is, and, one would allow staff to shoot the, rare, elk to death! It is critical that we make our voice heard!

The proposal comes following, two, federal lawsuits alleging negligence, and, violations of the law, reports of, serious, environmental, contamination from, privately-owned, cattle allowed to graze on the, public, lands, and, the outrage of thousands of people — including the 36,755 people who signed a petition — over the treatment of these, precious, and vulnerable, elk!

In a move long-awaited by, animal, advocates, the “National Park Service” has, finally, proposed taking down a fence that confines rare, Tule Elk to a fraction of the “Point Reyes National Seashore”!

The “NPS”, in its, official, announcement, noted the, new, proposal comes on the heels of, two, fatal droughts in the, past, eight years that reduced the “Tomales Point”, herd from 445 elk to 292 elk!

“Current, management, guidance for this area did not anticipate these, drought, conditions or consider climate change,” the “NPS” said.

Chance Cutrano, programs director for “The Resource Renewal Institute” — an, environmental, organization that is one of the plaintiffs in the lawsuit challenging the “PS” 's treatment of the elk to date — said elk MUST be protected “in a manner that protects that population’s health, safety and, ecological, integrity.”

Following the, 31-day, comment period, the “NPS” will evaluate feedback and draft an “Environmental Impact Statement”. Then there will be another public comment period prior to an expected, final decision, next, summer.

Tomales Point Area Plan

c/o Superintendent, Point Reyes National Seashore

1 Bear Valley Road

Support for Removing the Fence

I am writing to voice my strong support for the plan to remove the existing fence and consider adding a fence to keep cattle from private ranches in the park from entering Tomales Point. The park would also collaborate with the Federated Indians of Graton Rancheria in the management of the Tomales Point peninsula.

The Tule Elk lived at Point Reyes for thousands of years, existing in a beneficially symbiotic relationship with the local flora and fauna and with the Coastal Miwok. The elk were hunted to local extinction in the late 1800s by hunters and the recently encroaching ranchers. After shady legal maneuvers wrested the land from the original Spanish grantees, the agricultural interests flourished. Even though the ranchers eventually sold their land to the government and agreed to 25-year leases as part of the establishment of the national seashore, these "historic" agricultural interests now claim they have superseding "historical" rights to the land within this national park.

The ranchers have been poor stewards of this vital national resource and we should no longer place their narrow financial interests ahead of the environment and the health of important native wildlife.

William Barron

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Anita Schreiner-Weishaar

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that

found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Susan Fabrican

Gentlemen/Ladies:

Below is in language you will understand better than I. The help is needed to let the elk be loose in wilderness at Point Reyes. Please consider the whole bad situation this poor world is in. These animals are very dangerously losing their lives more and more each year. Read the appropriate legislation below and act in a positive way to remove the fences. Each step we take to make our earth a better place for all...humans and animals and microbes or we will lose it all.

Yours for a healing earth,

Joan Johnson

Please execute Alternative B, Unconfined Elk Herd and Pierce Ranch Core Area.

Thank you, National Park Service, for finally listening to the overwhelming voice of the public and removing the elk fence from Point Reyes. Fences are inappropriate in wilderness, and cattle should not be prioritized over wild animals.

Confined native elk dying of thirst and malnutrition in a National Park is not acceptable.

Once the elk fence is removed allowing the elk to roam freely, steps should be taken to avoid any culling, hazing, or harassment of the elk for any reason.

Cattle operations are no longer appropriate in Point Reyes and should be ceased to honor the true charter of our Seashore, stated in the Point Reyes Enabling Legislation as “the maximum protection, restoration, and preservation of the natural environment within the area,” and in the Organic Act of 1916 as to “provide for the enjoyment of the scenery, natural and historic objects, and wildlife in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.”

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that

found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms Patricia Peck

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. MariLee Carter

I have personally visited Pt Reyes and saw the elk confined to an area. Please take down the fence and let them roam free. They are way too close to humans and need more space to get away from humans. They are beautiful and huge. Please open their range and increase their gene pool and chances for survival.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. LAURIE KERR

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. Michael Weaver

Correspondence ID: 6944

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I thought removing the fence at the Tule Elk Reserve was a done deal!

Does this mean elk trapped inside are still dying of thirst during this record drought?

What is holding up Alt B at Tomales Point?

This isn't some When-You-Get-Around-To-It project: animals as alive as your dog are suffering in agonizing thirst as you read this!

Please get your tetanus shots and get out there with the wire cutters!

Oh--and for the love of God, officially rescind the current reg in the General Management Plan allowing you to kill ("cull") elk in the other two herds! That miserable fence has done more than enough "culling" and trophy hunters will gladly do even more.

Finally, invite the mooching ranchers off these public lands, so the Seashore's Tule elk are not exposed to fecal bacteria in soil, streams, and ponds as well as manure-borne cattle diseases, e.g., Johne's disease, which has infected 50% of area cattle operations.

The National Park Service has the know-how, the responsibility and the power to maintain America's treasures. Or, in this case, help them recover.

Sincerely, Ms. Maureen Allen

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, mary vanderweyst

Please execute Alternative B, Unconfined Elk Herd and Pierce Ranch Core Area.

Thank you, National Park Service, for finally listening to the overwhelming voice of the public and removing the elk fence from Point Reyes. Fences are inappropriate in wilderness, and cattle should not be prioritized over wild animals.

Confined native elk dying of thirst and malnutrition in a National Park is not acceptable.

Once the elk fence is removed allowing the elk to roam freely, steps should be taken to avoid any culling, hazing, or harassment of the elk for any reason.

Cattle operations are no longer appropriate in Point Reyes and should be ceased to honor the true charter of our Seashore, stated in the Point Reyes Enabling Legislation as "the maximum protection, restoration, and preservation of the natural environment within the area," and in the Organic Act of 1916 as to "provide for the enjoyment of the scenery, natural and historic objects, and wildlife in such manner and by such means as will leave them unimpaired for the enjoyment of future generations."

TAKE THE FENCES DOWN, Wildlife is dying!!

Tomales Point Area Plan

c/o Superintendent, Pt. Reyes National Seashore

1 Bear Valley Road

Point Reyes Station CA 94956

I am one of the people who have not heretofore contacted you regarding the elk in the Marin coastal area. I have let myself feel for their plight without raising my voice on their behalf, unsure it would do any good. However, I felt some hope when I read that taking down that fence is one of the options you are now considering. I beg you to do so.

How the right to roam was ever taken from these animals is inconceivable to me. You can reverse this, and I very much hope you will. Humans cause far too much suffering in this world. Let's take every opportunity to turn that around.

Thank you.

Avril B. Barron

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, JORDAN BAER

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Barbara Greenwood

Please execute Alternative B, Unconfined Elk Herd and Pierce Ranch Core Area.

Thank you, National Park Service, for finally listening to the overwhelming voice of the public and removing the elk fence from Point Reyes. Fences are inappropriate in wilderness, and cattle should not be prioritized over wild animals.

Confined native elk dying of thirst and malnutrition in a National Park is not acceptable.

Once the elk fence is removed allowing the elk to roam freely, steps should be taken to avoid any culling, hazing, or harassment of the elk for any reason.

Cattle operations are no longer appropriate in Point Reyes and should be ceased to honor the true charter of our Seashore, stated in the Point Reyes Enabling Legislation as “the maximum protection, restoration, and preservation of the natural environment within the area,” and in the Organic Act of 1916 as to “provide for the enjoyment of the scenery, natural and historic objects, and wildlife in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.”

I strongly support alternative B.

Take down the fence! Let the Tule elk do what wild animals should be able to do. For the time being continuing to provide water where they have been accustomed to finding it seems like the humane thing to do.

If ranchers have concerns about the elk getting into their cattle feed, or infecting the cows/cattle with Johne's disease, the park(we tax payers) should not be paying for additional fencing.

Correspondence ID: 7012

The Tomales Point Plan to protect precious wildlife including the Elk and their habitat which is a fragile ecosystem is immensely important! Removing the fence is key to the Elks survival giving them access to water which

is essential. Cattle have encroached on the ecosystem that the Elk and many other animals, plants and insects need desperately. In this time of climate crisis we need to restore the natural environment before it is too late. These integral species are vital to the health of the Earth. The future of our environment is in your hands.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Anne Martinez

I support Alternative B, the proposal to remove the elk fence and let the tule elk herds roam free.

Please also evaluate opportunities and strategies to:

Ensure cattle do not enter the wilderness area once the 8-foot elk fence is removed;

Enhance and restore habitat for threatened and endangered wildlife within the planning area;

Develop fire management practices within the planning area to maintain healthy ecosystems and natural processes;

Inventory and restore native coastal prairies within the planning area;

Assess climate-related impacts on water resources and native vegetation within the planning area;

Increase public access, use and enjoyment via new trails, camping, and other activities that integrate the planning area into a parkwide trail network

Expand public education and interpretation of Native American culture and history in consultation with the Federated Indians of Graton Rancheria and other descendants of Coast Miwok inhabitants;

Improve public education and interpretation about the Tomales Point elk and their role in the ecology of the Point Reyes peninsula.

Correspondence ID: 7029

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Kate Steele

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Jill Simpson

Please execute Alternative B, Unconfined Elk Herd and Pierce Ranch Core Area.

Thank you, National Park Service, for finally listening to the overwhelming voice of the public and removing the elk fence from Point Reyes. Fences are inappropriate in wilderness, and cattle should not be prioritized over wild animals.

Confined native elk dying of thirst and malnutrition in a National Park is not acceptable.

Once the elk fence is removed allowing the elk to roam freely, steps should be taken to avoid any culling, hazing, or harassment of the elk for any reason.

Cattle operations are no longer appropriate in Point Reyes and should be ceased to honor the true charter of our Seashore, stated in the Point Reyes Enabling Legislation as "the maximum protection, restoration, and preservation of the natural environment within the area," and in the Organic Act of 1916 as to "provide for the enjoyment of the scenery, natural and historic objects, and wildlife in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Claudia Dominici

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Tom Antony

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Dr. Antonio Scognamiglio

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

Dear Mr Kenkel,

Please REALIZE that Psychiatrists have well documented that there's a DIRECT LINK between animal abuse/cruelty and serial killers and harm of humans. This includes those who do nothing to stop animal abuse/cruelty. This is a FACT!!!

So what does this say about YOU, Craig Kenkel?!!

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Deborah Cash

When my father came here to visit for the first time in the early 1980's, he told me that Tomales Point in the Pt. Reyes National Seashore was severely overgrazed. It has not gotten better, in fact recent years of droughts have created an environment that has been catastrophic for the Native species as well as cattle ranching. We have to restore our habitat at the Seashore. First, we need to remove the fences that serve as death camp prison cells for the Tule Elk.

Next, we must address the cattle ranching. 20-year leases should not be considered! It is time to end ranching, a for-profit business for a select few. They have not nurtured nor maintained the land in a sensible manner. They do not plan ahead, they have taken advantage for too long.

Please... take down the Elk fences now, and restore the National Park for all living creatures!
Thank you for your consideration.

Please execute Alternative B, Unconfined Elk Herd and Pierce Ranch Core Area.

Thank you, National Park Service, for finally listening to the overwhelming voice of the public and removing the elk fence from Point Reyes. Fences are inappropriate in wilderness, and cattle should not be prioritized over wild animals.

Confined native elk dying of thirst and malnutrition in a National Park is not acceptable.

Once the elk fence is removed allowing the elk to roam freely, steps should be taken to avoid any culling, hazing, or harassment of the elk for any reason.

Cattle operations are no longer appropriate in Point Reyes and should be ceased to honor the true charter of our Seashore, stated in the Point Reyes Enabling Legislation as “the maximum protection, restoration, and preservation of the natural environment within the area,” and in the Organic Act of 1916 as to “provide for the enjoyment of the scenery, natural and historic objects, and wildlife in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.”

We strongly support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units!

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. We oppose all lethal "management" of any wild animals in our national parks!

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease! The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks!!!

We thank the National Park Service for requesting and considering public comments on this very important issue!

Sincerely, Mr. Dave and Rita Cross

Please execute Alternative B, Unconfined Elk Herd and Pierce Ranch Core Area.

National Park Service, thank you for listening to the overwhelming voice of the public and removing the elk fence from Point Reyes. Fences are inappropriate in wilderness, and cattle should not be prioritized over wild animals.

Confined native elk dying of thirst and malnutrition in a National Park is not horrible and completely wrong.

Once the elk fence is removed allowing the elk to roam freely, steps should be taken to avoid any culling, hazing, or harassment of the elk for any reason at all!

Cattle operations are no longer appropriate in Point Reyes and should be stopped and instead honor the true charter of our Seashore, stated in the Point Reyes Enabling Legislation as "the maximum protection, restoration, and preservation of the natural environment within the area," and in the Organic Act of 1916 as to "provide for the enjoyment of the scenery, natural and historic objects, and wildlife in such manner and by such means as will leave them unimpaired for the enjoyment of future generations."

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms Marianne Thomson

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Karol Thornton-Remiszewski

Please let the Elk free to go where they want so no more die from thirst. Stop the prioritizing of the ranches for profit and their incredible pollution of the land and water.

As a native Marin County resident I ask you to please remove the Elk fence and allow them access to water and local migration paths. NPRS has always been a protected and beautiful area and we cannot allow commercial ranching to impede on or cause death to longstanding wildlife in the area. We must all work together to preserve and protect this fragile and beautiful part of the Northern California ecosystem.

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Laura Lewis

I write this comment in order to express my strong opinion that the private ranches in west Marin County on land owned by taxpayers and administered by the Department of the Interior and serviced by The National Park Service, funded by our tax dollars, need to be closed and the land restored.

This land is part of the Golden Gate National Recreation Area and Point Reyes National Seashore Park which are held in trust for current and future generations of Americans.

The buildings, homes and other structures used by the ranchers are within the PRNSP. We, the taxpayers pay for the maintenance of the fences and roads on these properties. We repair roofs, barns and other infrastructure. Our taxes support ranches that damage the land through overgrazing which degrades the soil. Waterways are polluted with livestock waste. There is a reduction in plant and animal biodiversity, and of course, we the people have no access to ranchlands – even on property owned by all of us.

Kehoe, Abbotts Lagoon, Limantour and Drakes Bay (these are state-protected Marine Zones) are consistently found to be significantly polluted. E.coli (40 times higher than state standards) and Enterococci bacteria (300 times higher than state standards).

The National Park Service receives about \$500,000 in revenues from the ranch leases annually. This is less than half of what it costs to maintain them. Meaning the taxpaying public is subsidizing the 24 for-profit ranch operations in the national park.

Because they live and work on federal land, PRNSP ranchers pay no property taxes.

It is time to stop subsidizing ranch operations that are destructive to this amazing land that retains so much biodiversity but is in desperate need of healing.

I ask that you use your position as a member of Congress to return our national park land to the people – and to end the giveaways to private ranches subsidized by taxpayers. Future generations will thank you.

Sincerely, David Carlson

To whom it may concern,

As noted in The Bohemian's article Death by Design: How the National Park Service experiments on Tule Elk published on June 30th of 2021, "...the immigrant colonial settlers hunted them to extinction.

Once a half-million strong in California, the Tule Elk were churned into meat, hides and tallow by settlers. By the turn of the 20th century, their number could be counted on two hands. In 1976, responding to civilian-led conservation efforts, Congress protected the Tule Elk. Federal agencies partnered with the California Department of Fish and Wildlife and Indigenous tribal councils to locate wilderness habitats. In 1978, the National Park Service released 10 Tule Elk into 2,600 acres of scrubland at Tomales Point, and locked the door.

In 2018, Fish and Wildlife reported that 5,700 Tule Elk were thriving in the human-contoured wilds of California. The state agency protects them by controlling invasive weeds that replace elk forage, and providing mineral supplements and water when needed. Herd sizes rise and fall with the seasonal waxing and waning of resources. In the wild, matriarch-led herds are pruned by predators: bears, lions, wolves and licensed hunters squinting through rifle scopes.

But at the Tomales Point elk preserve, where thousands of Tule Elk have lived their lives confined behind a woven-wire fence, their principal predator is the Park Service.

The trapped animals suffer for lack of adequate plant forage, essential micronutrients and water. The Park Service acknowledges that the barrier is intended to keep thirsty, starving elk from foraging on 18,000 acres of seasonally grassy cattle and dairy ranches that are amply watered by streams and wells. Supporting 5,500 cows and bulls, the ranches are leased from the Park Service by members of immigrant ranching clans that settled at Point Reyes in the 19th century.

In March, the Park Service announced that the population of the Tule Elk herds confined at Tomales Point fell from 445 to 293 during 2020, a loss of 152 individuals. During the drought of 2013–2015, the loss was 250 elk. In both instances, the Park Service blamed "over-population and poor nutritional quality of forage" for the "drought-related" demise.

Last year, the Park Service removed water sources placed inside the preserve by kayakers practicing civil disobedience. But on June 11, the agency responded to public outcry and national press reports about elk dying from thirst and starvation. The agency then installed three gravity-fed water troughs near the entrance to the preserve, but they provide water for only one of the enclosure's four, territorially non-interacting herds, according to wildlife biologist Laura Cunningham of the Western Watersheds Project.

On June 22, the Harvard Animal Law and Policy Clinic sued Secretary of Interior, Deb Haaland, and Craig Kenkel, park superintendent, on behalf of the Animal Legal Defense Fund. The plaintiffs are demanding that the Tomales Point fence be removed because it is illegally killing the Tule Elk through forced starvation and dehydration. More lawsuits are likely as more facts about the historical treatment of the Tule Elk come to light.

In that regard, the Pacific Sun/Bohemian has obtained necropsies, scientific studies and Department of Interior records which tell a story of a half century of often lethal experiments performed on the Point Reyes Tule Elk.

Park personnel have defied scientific practices by “euthanizing” scores of healthy elk bulls and pregnant elk cows as a way of “testing for Johne's disease,” a syndrome that can be tested by non-lethal techniques. Rangers have chased elk cows with helicopters, hobbled and drugged them, and inserted radio transmitters into their vaginas.

The conditions of confinement of the elk at Tomales Point were known from the start to be incapable of supporting healthy herds. Each Tule Elk needs 10 to 15 pounds of forage per day, plus ample water and several acres of suitable habitat. For decades, the primary cause of elk mortality at Point Reyes has been outright starvation, drought or no-drought. A related cause of death is hemlock and lupine poisoning, as hungry elk eat toxic plants they would normally avoid. This is death by design.

In 1993, a panel of national elk experts told the Park Service that the best way to ensure the health of Tule Elk was to remove the fence and allow the herds to self-regulate their numbers. The report recommended removing the cattle ranches. The scientists' recommendation was ignored by the Park Service, which then proceeded to do the opposite.

The Park Service released necropsies of seven Tule Elk who died in during the fall of 2020. In total, 152 elk expired inside the enclosure. It is reasonable to extrapolate the probable causes of the deaths of the necropsied elk to the larger population, as the Park Service does.

All of the necropsied elk were severely emaciated. They had either died of starvation, or by plant poisoning brought about by starvation.

No doubt, they were all thirsty, but bodily dehydration was not the sole cause of death. Focusing on environmental dehydration is a key to understanding the decimation.

During droughts, edible plants dry out and fail to reproduce. The few and meager seasonal springs and seeps inside the preserve become baked mud.

Three of the necropsied elk were found alive, unable to stand or lift their heads; they expired within hours or were euthanized by gunshot. Before he passed, one young male, a “spike,” was “observed laying down, kicking and unable to right itself.” As with the other emaciated elk, the spike's muscle, fat and bone marrow were severely atrophied; his body was eating itself. He

perished foaming at the mouth and nose. His abdomen was swollen with excess fluid, and he suffered from hepatitis and liver abscesses. Worms were devouring the linings of his lungs, trachea and intestines. He died from starvation and maladies tied to mineral deficiencies and eating poisonous plants.

The Animal Legal Defense Fund lawsuit contains the affidavit of a highly credentialed veterinarian who reviewed the necropsies. Dr. Amy Allen testified, "I can think of no worse way to die. It is prolonged agony, where the elk are presumably hungry all of the time."

The elk had "consumed toxic plants which may indicate a lack of adequate forage." Three of the necropsied elk apparently expired from hemlock or lupine poisoning. When miner's lettuce, sheep sorrel, purple needlegrass, cheat grass and wild licorice are not to be found, a starving elk will eat poison hemlock, which flowers on tall stalks near water.

According to a University of California plant encyclopedia, "The leaves of poison hemlock look somewhat like parsley or wild carrot and have a disagreeable mousy odor." Ingesting the plant or its seeds is fatal to cattle, elk and humans. Within two hours of eating even a small amount, the body is wracked with nervous trembling and weakness. The pulse weakens and the heart beats irregularly, then the body convulses, falls comatose and dies. There is no antidote. The only prevention is to extirpate the invasive plants.

Yellow bush lupine is equally fatal. Inside the preserve, it roots in sandy, dry sites. "Signs of acute lupine poisoning include muscular trembling, incoordination, and excitement. Affected animals may wander aimlessly, push against objects, and appear dizzy."

In summary, the necropsies indicate that most of the 152 confined elk died from starvation and diseases resulting from a lack of essential minerals. Close to 50% may have eaten from the preserve's cornucopia of poisonous plants, which are allowed by the Park Service to thrive despite their deadly effects. By contrast, poisonous plants are continually removed from the park-owned, commercially-leased cattle pastures located outside the fence.

All of the seven necropsied elk suffered from a serious lack of copper and selenium, trace minerals which regulate ruminant health. Elk bodies require minuscule amounts of copper to strengthen bones and antlers, and to protect reproduction. Bodies absorb copper from eating plants that suck it from the soil. But at Point Reyes, the mass of granitic rock supporting top soils does not provide a sufficient reservoir of leachable copper.

Compounding the problem, tart, crunchy miner's lettuce, an elk diet staple, contains molybdenum. That chemical weakens the health functions of copper. And, the oceanic fogs which bathe Point Reyes with life-giving moisture contain sulfates that interact negatively with copper, lowering mammalian resistance to disease and parasites.

Selenium repairs damaged cells and protects metabolic and reproductive functions. It is a necessary component in the diets of all mammals. As with copper, selenium is not present in life-enhancing amounts in the soils at Point Reyes. That is why cattle ranchers feed copper and selenium supplements to cows. But the Park Service refuses Tule Elk such "unnatural" help inside its man-made, institutionally-engineered preserve.

Outside the three-mile-long fence, free-ranging elk also suffer from copper and selenium deficiencies and, during droughts, die from starvation, although to a lesser degree than the perennially starving herds confined at Tomales Point.

Two herds of “free-ranging” Tule Elk live near Limantour Beach and Drakes Beach. Established 20 years ago, they number about 450 individuals. The animals graze stretches of grassy, non-ranching park land and, when they can, pastures along Drakes Beach Road that are leased to ranchers; although they avoid these fields when cattle are present.

Officially labeled “free-ranging,” the movements of the Drakes Beach and Limantour herds are constrained by twisted-wire fences, ranching infrastructure and “hazing” by rangers in vehicles and horseback who harass them away from green pastures.

In a series of letters to the Park Service from 2011–2014, the Point Reyes Seashore Ranchers Association claimed that free-ranging elk knock down fences, eat valuable grasses, drink precious water, harass cows and reproduce at an alarming rate.

On its list of written demands for expanding the current scope of allowed ranching activities, the Association asked the Park Service to “recognize that the seashore ranchers are more endangered than the Tule Elk.”

The Association falsely blames the Tule Elk for infecting cattle with Johne's disease. It asks for large numbers of elk to be periodically “culled,” i.e., killed. Public opinion and the law stand in the way of lethal culling to satisfy rancher complaints. But, according to 21 additional necropsy records obtained by the Pacific Sun/Bohemian, the Park Service has been “euthanizing” healthy and pregnant Tule Elk under the rubric of controlling Johne's disease. “Euthanasia” is a term reserved for mercifully ending the life of a suffering animal or person. These healthy Tule Elk were not euthanized.

From October 2015 to December 2016, the park's “wildlife ecologists” killed 27 free-ranging Tule Elk, including five pregnant females. The 300–550 lb. corpses were gutted and inspected in the field, or transported to a mortuary lab at UC Davis for more sophisticated testing and analysis. Records suggest that the animals were scheduled to be “collected” when park visitors were not able to bear witness.

The killings were authorized under a “Johne's disease surveillance” program. The healthy elk were “submitted” with bullets to the neck or brain. Their internal organs were photographed and inspected for lesions and microbes peculiar to Johne's disease. Tissue slices and blood samples were delivered to a laboratory in Wisconsin for analysis. Notably, the 21 necropsies do not record any positive findings of Johne's disease in the examined elk.

On the morning of Oct. 22, 2015, park rangers shot three healthy adult males “in the vicinity of Drakes Beach Road.”

On Nov. 4, two bull elk “in good nutritional condition” were shot in the brain.

On Nov. 19, rangers “collected” two cow elk: “Both elk appear to be generally healthy without evidence of serious disease. [They were] euthanized by gunshot.”

On Dec. 2, two females wandering near Drakes Beach road were “euthanized by gunshot and submitted.” One was pregnant with a “13 cm crown-rump male fetus.”

On Dec. 11, the Johne's surveillance team killed two elk; one was pregnant. “Both elk seemed to have been in good health at the time of euthanasia.”

On Jan. 21 an elk with a “mid-term pregnancy” was shot in the head and a “well-fleshed” female was shot in the face.

On Jan. 26, two elk “in good body condition with adequate amounts of reserve fat” were shot in the brain. “The 404 lb. female elk is pregnant with a male fetus.”

On Jan. 28, two healthy elk were “collected.” A 330 lb. female was “pregnant with a male fetus.”

On Feb. 10, a 556 lb. “healthy adult” male in “good nutritional state with well-fleshed muscles” was “euthanized for health surveillance.”

On Feb. 26, a 592 lb. “healthy adult” male in “good nutritional state” was “shot in the head ... euthanized for John's assay. ... The lungs are diffusely soft and pink. The rumen contains abundant green and fibrous ingest ... the colon contains soft, unformed feces. ... There was no evidence of John's disease.”

On Dec. 20, 2016, a 482 lb. male in “good nutritional condition” was “sacrificed as a disease suspect. ... The results from the John's testing lab were negative.”

Counting the unborn, the death toll of the testing was 32 elk. During this period, three other elk were killed by cars or died of “unknown causes” in the Drakes Beach vicinity.

In 2018, the Park Service released a report on Tule Elk management, coauthored by wildlife ecologists David Press and Tim Bernot. “Park staff monitored the presence of Tule elk on park ranches ... through visual observations and the deployment of GPS collars.” The growth of the free-ranging herds fell due to “the [lethal] collection of elk ... to test for the presence of John's disease, [and] the removal of a portion of breeding age females for disease surveillance.”

The report noted that two necropsied elk tested positive for John's in the lab. But no positive results were reflected in the necropsy reports reviewed by the Pacific Sun/Bohemian. Kenkel and his staff have not responded to repeated requests for comment.

According to the National Institutes of Health, cattle are the No. 1 vector for John's disease, which is rampant in confined herds in the United States. Tule elk are not considered John's vectors. However, the paratuberculosis bacteria associated with John's disease is carried by deer, goats, sheep, rabbits, foxes, birds and monkeys. In humans, it is conjectured to cause Crohn's disease, a painful, incurable gastronomic infection.

John's is commonly tested in cattle by examining the chemistry of feces. And that was the method initially deployed for testing Tule Elk at Point Reyes. But, after the Association began complaining about the size of the elk herds at Drakes Beach and Limantour, “euthanizing” elk for “disease surveillance” commenced on an unprecedented scale.

The Park Service publicly claims it resorted to post-mortem laboratory testing of tissue and blood samples because the feces-testing method can result in false negatives, i.e., failing to find evidence of disease when it is actually present. But according to the National Institute of Health's John's-disease guidelines, laboratory tests often result in false positives, i.e., finding supposed signs of John's when the animal is not diseased.

And, the NIH reports, feces testing has the highest rate of diagnostic accuracy, and it is by far the scientifically preferred method.

The main indications of Johne's are heavy diarrhea combined with lethargy and emaciation. When those signs are evident, death is not far off, and it is reasonable to euthanize and conduct lab tests to try and confirm the cause of death.

According to the NIH, the most effective Johne's tests look for cellular-level evidence that emerges after the disease progresses to the diarrhetic stage.

Importantly, the NIH states that tissue and blood tests of uninfected animals in an environment where Johne's-causing bacteria is present can "yield a false positive result." Such could be the case for tule elk grazing in pastures fertilized with liquified cow manure, as is done throughout the park.

Further calling into question the viability of Johne's testing methodologies, the NIH reports that lab tests utilizing radioactive markers are subject to high levels of false negatives and false positives. And the agency found that an unacceptable number of Johne's testing labs are themselves failing to meet industry proficiency standards.

In short, under the best of circumstances, Johne's is a difficult disease to diagnose before it reaches its nasty, final stage. Consequently, the NIH and the Cornell University College of Veterinary Medicine recommend using relatively cheap, on-site fecal tests, because they tend toward a lower rate of false positives than high-tech lab tests.

The only way to really get rid of Johne's disease in Point Reyes is to extirpate cattle ranching, which is the primary Johne's vector. The Park Service agrees. According to the agency's 2020 Environmental Impact Statement, "Under Alternative F [eliminating ranching], ranching activities would not disturb elk once ranching activities cease, which would result in long-term, beneficial impacts on the elk population compared to existing conditions."

Now retired, University of California, Berkeley wildlife biologist Dale R. McCullough studied the Tule Elk for decades. In 1993, he chaired a scientific panel of national experts chartered by the Park Service to consider the possibility of deploying chemical contraception to limit the growth of the confined herds at Tomales Point. The panel concluded that such attempts to control birth rates would likely flounder due to unintended consequences.

The panel explained that chemically-based contraception is expensive, ineffective after a year and technically difficult to implement on enough females to make a difference. Inside the confined preserve, it would likely increase birth rates because the population numbers are already depressed by lack of proper nutrition. This is a complex and counter-intuitive argument worth deconstructing, because contracepting the Tule is still being discussed as a viable option by the Park Service.

McCullough's panel began by reporting that the captive herds at Tomales Point are perennially "malnourished [and overstocked with] dead and dying animals." Calves suffered abnormally high death rates. Due to a general lack of nutritive resources, because of the depleted soil and frequent droughts, the scientists found that the preserve is simply not a suitable habitat for Tule Elk.

Secondly, the panel observed that pregnant females need to consume more energy in the form of forage than males and non-pregnant females. Therefore, artificially preventing a subset of females from becoming pregnant could increase the amount of nutritive resources beyond what would be available in the absence of contraception. That bounty would increase the survival

chances of the herd-at-large. It would also energize previously food-challenged females, who would not have become pregnant, to gestate.

Because trying to artificially control the size of a confined herd leads to unexpected consequences, the scientists declared, "[The] data suggest that natural regulation of this population in the absence of control is a real possibility."

The panel also cautioned that the health of confined and isolated herds is inevitably jeopardized by genetic inbreeding, which reinforces biological weaknesses. Therefore, the panel concluded, "We recommend that the elk herd be permitted to self-regulate with regard to population size ... The long-range goal of elk management at PRNS should be the re-establishment of free-ranging elk throughout the seashore and associated public lands. This would involve ... removal of the fence across Tomales Point."

In 1998, "consistent with sound scientific principles," the Park Service released its "Tule Elk Management Plan and Environmental Assessment." It concluded, "Tule elk at Point Reyes are a component of the original native fauna. ... Their limitation to Tomales Point is an historic artifact of their reintroduction onto an area bounded by historic ranches and the intent to restrict their movements to a protected preserve. If they are to remain as part of the Seashores' fauna and ecological processes, they should eventually become free-ranging throughout most of the Seashore's natural zones where conditions allow."

That was nearly a quarter century ago, and the elk are still trapped, still dying of starvation and subject to experiments that profane the name of science.

Between 1997 and 2001, the Park Service ignored the McCullough panel's warning about the futility of contraception. Terrified Tule Elk were chased with helicopters. Two hundred females were hobbled, blindfolded and injected with porcine zona pellucida. The chemical birth control program was soon abandoned as costly and ineffective.

From 2005 to 2008, the Park Service partnered with University of California, Berkeley wildlife ecologist, McCrea Andrew Cobb, as he researched his doctoral thesis, "Spatial Ecology and Population Dynamics of Tule Elk at Point Reyes." Cobb concluded, "The primary cause of death for [Tule Elk] cows and calves was starvation, which was often accompanied by copper and selenium deficiencies." He noted that, historically, Tule Elk passed through Point Reyes during fecund, rainy seasons; it was not their year-around residence of choice.

Tule elk prefer to graze and browse in low-lying, flat, wet, grassy pastures, not the steep, brushy, windy, desertifying, hiker-infested slopes of Tomales Point. The pastures leased to cattle ranchers are a more pleasing habitat for Tule Elk, although McCrea observed elk "avoiding pastures when cattle were present."

However, Cobb's findings do not describe the behaviors of non-captive, wild Tule Elk. And the methods by which he collected his data are chilling.

According to Cobb, "Between 2005 and 2008, 42 Tule Elk cows were immobilized using helicopter net-gunning. Captured elk were hobbled, blindfolded and fitted with uniquely numbered ear tags and a mortality-sensing VHF radio telemetry collar. ... One cow died of capture-related injuries during the helicopter-based capture."

Immobilization was achieved by injecting the bound animals with cocktails of ketamine, medetomidine, xylazine and lidocaine. The bodily dimensions of unconscious elk were recorded. A tooth was extracted from each elk to estimate age.

He further noted that,

“Attempts were made to fit pregnant elk with a radio telemetry vaginal implant transmitter to determine calving success and to facilitate calf [radio] collaring.”

“I captured, collared and monitored 84 neonatal elk calves to determine calf survival rates and cause-specific mortality. ...Calves average 3 days old at capture.”

“25% of the radio-collared calves died, and I opportunistically discovered 19 unmarked calf mortalities. ...The most commonly identified cause of calf mortality was starvation.”

“Another primary source of calf mortality was septicemia ...the cause was unknown,” although he acknowledged that fatal infections could have been caused by bacterial loads passed from researchers to the hobbled and drugged newborns with permeable immune systems.

One day, a female “escaped from the Tomales boundary and [was] shot by the NPS.”

Cobb noted that the quality of forage outside the fenced reserve is of “much more high quality.” He concluded, “Conflicts between elk and local ranchers are likely to occur.”

During the 19th century, European immigrants settled as beef and dairy ranchers at Point Reyes peninsula and West Marin on lands taken from Indigenous people. After working as tenant-farmers, some families bought large spreads on both sides of Tomales Bay. The families often intermarried, coalescing into land-owning clans.

Tens of thousands of acres of ranchlands in West Marin and Point Reyes National Seashore are controlled through deed or lease by members of the Grossi, Mendoza, McClure, Kehoe, Evans, Rossotti, Giacomini, Dolcini, Straus and Spaletta clans.

Family members wield considerable political power through organizations such as Marin Agricultural Land Trust (MALT), Marin Board of Supervisors, Marin County Farm Bureau and the Point Reyes Seashore Ranchers Association.

In the early 1970s, family members sold their Point Reyes farms to the National Park Service at fair market prices. The sellers signed “Residential Reservations of Use and Occupancy” or “RUO” contracts with the Department of the Interior. In return for being allowed to rent and farm the now-government-owned ranches, sellers agreed to vacate in 20–25 years.

Meanwhile, the RUOs required them to maintain ranch buildings, roads and fences; to not pollute the waterways with chemicals and manure; and to return the property in the same condition it was in when leased. Sellers agreed to abide by this term: “Wildlife shall be permitted to graze or browse unmolested.”

When the RUOs began to expire in the 1990s, the Department of Interior issued a “briefing statement” to a congressional committee. It concluded, “National Park Service policy, NPS-53, clearly prohibits an extension of a Reservation of Use and Occupancy.”

Regardless, the Park Service signed multi-year Special Use Permits with the ranchers, who did not want to vacate, despite having banked tens of millions of dollars, collectively, in return for

promising to do so. Notably, NPS-53 prohibited the issuance of permits that “conflict with other existing uses.” Elk grazing, for example.

And now that the Special Use Permits have expired, the clans are clamoring for more special treatment: 20-year leases renewable in perpetuity, bed and breakfasts, and retail stores. And they insist that the free-ranging Tule Elk be permanently removed. Rancher Ralph Grossi wrote to the Park Service in his capacity as the board chair of MALT, “When livestock are found in Wilderness, they are removed. Likewise, when Elk are found on leased ranches.”

While I apologize for this lengthy citation, I feel as though it fully outlines the issues associated with the impact of the current restrictive and devastating practices that are currently in place. With this in mind, I am writing to respectfully request that adequate consideration be given to the survival of these true natives to the area and real contributors to the overall environmental health of Tomales Point.

Please support Alternative B: Unconfined Elk Herd and Pierce Ranch Core Area.

Please recognize the status of PRNS as a protected area and allow this fence to be taken down so the elk can roam freely.

The cattle use vast amounts of water and land to graze. In return, they dump 10 million gallons of feces and urine on national parklands every year. They trample habitat, kill endangered grassland species, introduce invasive weeds, and despoil streams with fecal coliform, imperiling threatened species such as Coho salmon and California red-legged frogs, among others.

These ranches add little to the economy. “Beef and milk are overproduced in California and the United States, and both are heavily subsidized, holding prices below actual costs,” says Bob Johnston, Inverness resident and retired professor of land use planning at UC Davis.

NPS has fenced the elk inside one part of the national seashore, effectively trapping them when food and water grow scarce. There have been numerous deaths of elk in this area, the sole reason being they can't leave the area to forage for food and water.

Again, please recognize the status of PRNS as a protected area and allow this fence to be taken down so the elk can roam freely.

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that

found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. holly perez

Please execute Alternative B, Unconfined Elk Herd and Pierce Ranch Core Area.

Thank you, National Park Service, for finally listening to the overwhelming voice of the public and removing the elk fence from Point Reyes. Fences are inappropriate in wilderness, and cattle should not be prioritized over wild animals.

.

Confined native elk dying of thirst and malnutrition in a National Park is not acceptable.

Once the elk fence is removed allowing the elk to roam freely, steps should be taken to avoid any culling, hazing, or harassment of the elk for any reason.

Cattle operations are no longer appropriate in Point Reyes and should be ceased to honor the true charter of our Seashore, stated in the Point Reyes Enabling Legislation as "the maximum protection, restoration, and preservation of the natural environment within the area," and in the Organic Act of 1916 as to "provide for the enjoyment of the scenery, natural and historic objects, and wildlife in such manner and by such means as will leave them unimpaired for the enjoyment of future generations."

Correspondence ID: 7303

I sincerely thank NPS for this important planning process and work.

I support Alternative B and I am grateful that it is the NPS preferred alternative.

I believe that Alternative B would provide necessary protection for the cultural and natural resources in the Tomales Point Area. I also like the proposed habitat restoration and trail

improvements. And it is long past time to remove the harmful fence so that tule elk may finally roam free.

For this updated plan, I urge NPS to pursue opportunities and strategies to:

Ensure cattle do not enter the wilderness area once the 8-foot elk fence is removed;

Enhance and restore habitat for threatened and endangered wildlife within the planning area;

Develop fire management practices within the planning area to maintain healthy ecosystems and natural processes;

Inventory and restore native coastal prairies within the planning area;

Assess climate-related impacts on water resources and native vegetation within the planning area;

Increase compatible and environmentally responsible public access, use and enjoyment via new trails, camping, and other activities that integrate the planning area into a parkwide trail network

Expand public education and interpretation of Native American culture and history in consultation with the Federated Indians of Graton Rancheria and other descendants of Coast Miwok inhabitants;

Improve public education and interpretation about the Tomales Point elk and their role in the ecology of the Point Reyes peninsula.

Strive to reduce fossil fuel use, increase clean energy use, and encourage more sustainable practices and products.

I hope that my comments are helpful.

Thank you very much for this diligent work and for considering my comments.

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Nancy Petersen

For many reasons, the dairies in the Pt. Reyes National Seashore must continue to exist, as outlined in the original plans establishing the Pt. Reyes National Seashore. I was there at the dedication of the Seashore by then First Lady Ladybird Johnson, as a member of the Tomales High School Band which played at the event. I grew up in that community, going to school with students who grew up on those dairy farms and ranches, and I've spent decades visiting, exploring, camping in and introducing my children and grandchildren to this very special place. Eliminating the dairies in the Seashore would also have a devastating effect on the entire

agricultural infrastructure of West Marin, and would likely lead to the elimination of many more farms and ranches, thereby destroying the very character of what makes West Marin the wonderful place it is and has been.

As to removal of the elk fence, this would in essence lead to the destruction of the remaining dairies and ranches within the Seashore, a well known fact. Having a Master's Degree in Environmental Biology, I have been closely following the reintroduction of the Tule Elk to the Seashore. It should be obvious that unless the entire ecosystem is restored to the way it was, including predators of Tule Elk, the herd(s) must be managed one way or another to prevent overpopulation. We have already seen how that works with the introduction of deer species in years past, which were ultimately eliminated. The Tule Elk population must be humanely managed either by sterilization, or by culling some of the herd(s), perhaps distributing the meat to local members of the remaining indigenous peoples in Marin and Sonoma Counties. If this were done, there would be no need to remove the elk fence.

I strongly encourage the park planners to continue on the path to maintaining coexistence of dairies, ranches, and elk in the Pt. Reyes National Seashore, as outlined above.

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. Sylvain Sufried

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Laurie Rowe

Hi Charles,

The National Park Service is receiving public comments regarding its management plan for tule elk currently held behind a fence at Tomales Point in Point Reyes National Seashore. Confined behind the fence, there have been massive die-offs, especially during drought years, where they are cut off from adequate water sources. The ecological health of the Seashore is tied to the re-wilding of this iconic species.

It is time to let these magnificent wild animals roam free in our National Seashore.

Please take action today. It only takes a minute or two.

Photo by Sarah Killingsworth.

The comment period ends on September 25, 2023. Please join us in asking the Park Service to remove the 8-foot fence that dooms native tule elk to slow and painful deaths during recurring drought periods.

It is easy to comment, but you must do so on the NPS web page.

<https://parkplanning.nps.gov/document.cfm?documentID=131377>

You can simply copy/paste some of the points below, though adding a personal touch to your message makes your comments more effective. There is more information at our blog at <https://seaturtles.org/the-plight-of-tule-elk-in-point-reyes-national-seashore/> and at the Park Service link above.

Points to make:

Please execute Alternative B, Unconfined Elk Herd and Pierce Ranch Core Area.

Thank you, National Park Service, for finally listening to the overwhelming voice of the public and removing the elk fence from Point Reyes. Fences are inappropriate in wilderness, and cattle should not be prioritized over wild animals.

Confined native elk dying of thirst and malnutrition in a National Park is not acceptable.

Once the elk fence is removed allowing the elk to roam freely, steps should be taken to avoid any culling, hazing, or harassment of the elk for any reason.

Cattle operations are no longer appropriate in Point Reyes and should be ceased to honor the true charter of our Seashore, stated in the Point Reyes Enabling Legislation as "the maximum protection, restoration, and preservation of the natural environment within the area," and in the Organic Act of 1916 as to "provide for the enjoyment of the scenery, natural and historic objects,

and wildlife in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.”

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs Barbara Puett

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. Phil Neal

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that

found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, dee power

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mimi Wickert

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Barb Thibault

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely,

Ms. Elena Lee

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely,

Ms. Elena Knox

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely,

Mrs. Patty Kuhner

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely,

Miss Erin Eitel

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely,

Rob Lozon

As a Marin County resident who loves the Point Reyes National Seashore, I wholeheartedly support Alternative B of this plan. I would also consider not removing supplemental water for the Elk if it is actually helping them. The work has already been done to add this support for them. If over time, they naturally migrate and are not using the water, then of course let nature take its course.

Thank You!

~ Antonio ~

As a trained biologist I wholeheartedly support Alternative B, which pulls down the Tule Elk fences and lets the herds roam free. Given the tenuous status of this and other threatened species at PRNS, I urge the NPS to explore strategies that ensure cattle does not stray into wilderness land, as well as to do all the NPS can to enhance and restore the Tule elk habitat, including native coastal prairies. They should also develop a fire management plan to bring the ecosystems into a sustainable natural balance, while assessing climate change impacts on these ecosystems. NPS should expand public education on what role the Tule Elk play within the ecosystems there.

Once the herds reach sustainable sizes, NPS should also explore enhancement of the conservation status of the species by re-introducing extra animals into other suitable parts of California.

Dear National Park Service, I agree with your preferred "Alternative B" to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

In addition, I want all these private cattle ranches removed from our public park. Their thousands of cows produce millions of gallons of manure and urine every year, contaminating the park's streams and poisoning elk, fish and all wild animals — and humans too! Commercial cattle operations pollute and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Thank you.

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely,

Mr. Hector Arias

I am writing to respectfully ask that the fence confining rare Tule Elk to a fraction of the Point Reyes National Seashore be taken down. Alternative B would allow the elk, currently in a 2,900 acre area of poor forage known as the "Preserve," to finally roam free! It also would allow the NPS to consider building a fence to keep privately-owned cattle from entering Tomales Point.

The NPS, in its official announcement, noted the new proposal comes on the heels of two fatal droughts in the past eight years that reduced the Tomales Point herd from 445 elk to 292 elk. About one-third of Tomales Point's elk herd — or a reported 152 elk — died during California's 2020 drought, reportedly from dehydration and starvation. "Free-roaming elk outside the fenced area did not experience the same population fluctuations or declines. Elk must be protected "in a manner that protects that population's health, safety and ecological integrity.

I am aware that the proposal also comes following two federal lawsuits alleging negligence and violations of the law, reports of serious environmental contamination from privately-owned cattle allowed to graze on the public lands, and the outrage of thousands of people over the treatment of these precious elk.

We must speak up now for elk and voice our support of Alternative B that will remove the fence and allow them to roam free! These elk already are facing enough of a threat from climate change, thirst, and malnutrition — they need all the support they can get!

Please be responsible (and humane) and pass Alternative B. Thank you.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely,

Mr. Shane Jackson

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely,

Mrs. Susan Hottle

I am writing in support of Alternative B: Unconfined Elk Herd and Pierce Ranch Core Area (NPS Proposed Action). The National Park Service mission is to "preserve unimpaired the natural and cultural resources and values of the National Park System for the enjoyment, education, and inspiration of this and future generations". Pt. Reyes National Seashore has historic ranches to illustrate the cultural history of the ranching period, but little exposure of the visitor to Tule elk. When I hike in the park with friends, we do not choose trails that allow us to gaze on dairy cows or ranch barns. We search out areas of natural beauty and are thrilled when that includes sightings of Tule elk. We plan many of our hikes to Point Reyes for fall when we can hear the elk bugle. Bison at Yellowstone, moose at Grand Teton, bighorn sheep at Rocky Mountain, these are huge draws to the national parks. An unconfined elk herd will draw many

visitors to see the Tule elk at Pt Reyes National Seashore. Remember why the National Park Service was created in the first place “....to conserve the scenery and the natural and historic objects and the wild life therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.”

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

Je soutiens l'alternative B préférée du National Park Service pour la réserve de wapitis de Tomales Point Tule à Point Reyes National Seashore, afin d'enlever la clôture et de libérer le plus grand troupeau de wapitis de Tule du parc. Les clôtures et les animaux confinés n'ont pas leur place dans les unités des parcs nationaux.

De plus, veuillez annuler officiellement le règlement actuel du plan général de gestion autorisant l'abattage (« abattage ») des wapitis dans les deux autres troupeaux, car les troupeaux peuvent se mélanger lorsque la clôture est enlevée. Je m'oppose à toute « gestion » mortelle de tout animal sauvage dans nos parcs nationaux.

Enfin, le wapiti de Tule du littoral ne peut être libre, sain et sécuritaire tant que les exploitations bovines privées ne sont pas retirées, car ils exposent les wapitis aux bactéries fécales dans le sol, les cours d'eau et les étangs, ainsi qu'aux maladies du bétail transmises par le fumier, y compris la paratuberculose. Le NPS lui-même cite une étude de 1979 qui a révélé que la moitié des ranchs laitiers du parc étaient infectés par la maladie de Johne. Les exploitations bovines privées n'ont rien à faire dans nos parcs nationaux.

Je remercie le Service des parcs nationaux d'avoir demandé et pris en considération les commentaires du public sur cette question très importante.

Sincerely,

Mrs. solange tessier

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I Support Historic Opportunity to Remove Deadly Tule Elk Fence!

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely,

Dr. Ted Dad

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

It's cruel and barbaric to see these animals suffering because us humans have become selfish and greedy.

Don't let these animals only be read about in history books because they have become extinct.

Help them!!!!

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

My understanding is that the ranches were given 50 years leases to continue ranching when the Pt. Reyes National Seashore was established. At the end of the 50 year run, for a variety of reasons, the ranches were not closed and given another period of time to continue ranching. There are a great deal of other places to ranch. I encourage the Park Service to follow through on the original vision and phase out the ranches while gradually restoring and rewilding the area to give the tule elk a greater area to roam and also restore many other native habitats and species. Lets give the Pt Reyes National Seashore the priority over ranching in this particular area designated as a National Seashore. Please phase out the ranches and restore the land to the tule elk, other native species while making appropriate human access for activities appropriate to a national park. Thank you.

The wildlife in any given park monument should have priority grazing or hunting rights.

The wildlife are the original fauna occupants of the landscape.

We have already taken some very large percent of their historic lands for our own uses and missuses. Leave public land to the wildlife.

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely,

Ms. Karen Piche

Please remove the fence!

- Please execute Alternative B, Unconfined Elk Herd and Pierce Ranch Core Area.

- Thank you, National Park Service, for finally listening to the overwhelming voice of the public and removing the elk fence from Point Reyes. Fences are inappropriate in wilderness, and cattle should not be prioritized over wild animals.
- Confined native elk dying of thirst and malnutrition in a National Park is not acceptable. In fact, it's appalling.
- Once the elk fence is removed allowing the elk to roam freely, steps should be taken to avoid any culling, hazing, or harassment of the elk for any reason.
- Cattle operations are no longer appropriate in Point Reyes and should cease to honor the true charter of our Seashore, stated in the Point Reyes Enabling Legislation as "the maximum protection, restoration, and preservation of the natural environment within the area," and in the Organic Act of 1916 as to "provide for the enjoyment of the scenery, natural and historic objects, and wildlife in such manner and by such means as will leave them unimpaired for the enjoyment of future generations."

Correspondence ID: 7735

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely,

Dr. Frederik van der Vyver

Correspondence ID: 7744

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I am writing to express my strong and enthusiastic support for the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, which proposes the removal of the fence and freeing of the park's largest herd of Tule elk.

I believe that fences and the confinement of animals should not occur in national park units.

Also, please officially rescind the current regulation in the General Management Plan allowing the killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed.

I strongly oppose all lethal management of wild animals in our national parks. Wildlife populations should be allowed to flourish in these protected areas, for the benefit of ours and future generations, and for the benefit of ecosystems and the wildlife itself.

Finally, I believe that the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed. Cattle operations expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. I have learned that the National Park Service itself has cited a 1979 study that found that half of the park's dairy ranches were infected with Johne's disease. This poses a very clear threat to elk and other wildlife. Therefore, private cattle operations should not be allowed in our national parks.

I thank you for considering my comments and opinion on this very important issue, and for helping to protect Tule Elk and other wildlife.

Sincerely,

Mr. Jeremy Carpenter

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely,

Kalyn Salmon

Please free the elks in point reyes so that they can thrive, we already saw they died because of the drought in marin county.

Correspondence ID: 7797

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk.

Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed.

I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease.

The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely,

Ms. C Rising

Please execute Alternative B, Unconfined Elk Herd and Pierce Ranch Core Area.

Thank you, National Park Service, for finally listening to the overwhelming voice of the public and removing the elk fence from Point Reyes. Fences are inappropriate in wilderness, and cattle should not be prioritized over wild animals.

Confined native elk dying of thirst and malnutrition in a National Park is not acceptable.

Once the elk fence is removed allowing the elk to roam freely, steps should be taken to avoid any culling, hazing, or harassment of the elk for any reason.

Cattle operations are no longer appropriate in Point Reyes and should be ceased to honor the true charter of our Seashore, stated in the Point Reyes Enabling Legislation as "the maximum protection, restoration, and preservation of the natural environment within the area," and in the Organic Act of 1916 as to "provide for the enjoyment of the scenery, natural and historic objects, and wildlife in such manner and by such means as will leave them unimpaired for the enjoyment of future generations."

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely,

Pat Shannon

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely,

Ms. Birgitte Anker

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely,

Mr. Eric PRAT

Correspondence ID: 7908

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

Je soutiens l'alternative B préférée du National Park Service pour la réserve de wapitis de Tomales Point Tule à Point Reyes National Seashore, afin d'enlever la clôture et de libérer le plus grand troupeau de wapitis de Tule du parc. Les clôtures et les animaux confinés n'ont pas leur place dans les unités des parcs nationaux.

De plus, veuillez annuler officiellement le règlement actuel du plan général de gestion autorisant l'abattage (« abattage ») des wapitis dans les deux autres troupeaux, car les troupeaux peuvent se mélanger lorsque la clôture est enlevée. Je m'oppose à toute « gestion » mortelle de tout animal sauvage dans nos parcs nationaux.

Enfin, le wapiti de Tule du littoral ne peut être libre, sain et sécuritaire tant que les exploitations bovines privées ne sont pas retirées, car ils exposent les wapitis aux bactéries fécales dans le sol, les cours d'eau et les étangs, ainsi qu'aux maladies du bétail transmises par le fumier, y compris la paratuberculose. Le NPS lui-même cite une étude de 1979 qui a révélé que la moitié des ranchs laitiers du parc étaient infectés par la maladie de Johne. Les exploitations bovines privées n'ont rien à faire dans nos parcs nationaux.

Je remercie le Service des parcs nationaux d'avoir demandé et pris en considération les commentaires du public sur cette question très importante.

Sincerely,

Mrs. virginie gautron

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely,

Luciana Redolfi

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely,

Luciana Redolfi

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely,

Luciana Redolfi
