

Figure 4. Average, median, and other summary statistics for fecal coliform concentrations for the Project Area Pre-Restoration, during Passive Restoration, and in the first four years of Full Restoration. Note: dashed lines for boxplots indicates both right- and left-censored data. Light-shaded grey boxplots indicate first and third quartiles ( $25 \%, 75 \%$ ), while dark-shaded grey boxplots indicate median confidence intervals. Lines indicate $10^{\text {th }}$ and $90^{\text {th }}$ percentiles. Medians are indicated by diagonal-hatched circle, with means designate by black triangles. Note: dashed lines for boxplots indicates both right- and left-censored data.
